 XX Mutants of species-dependent antibodies with affinity for non-human
 XX mammalian antigen - greater than for parent antibody, particularly used
 XX for pre-clinical trial(s) in rhesus monkey(s) of therapeutic antibodies
 XX directed against CD11a.
 PS Disclosure; Page 53; 71pp; English.
 XX This sequence represents the light chain of the humanised antibody MEM24,
 XX and was used to produce a mutant of the invention. The mutants are of a
 XX species-dependent antibody (Ab), and have an amino acid substitution in a
 XX variable region of the Ab, and binding affinity for an antigen (Ag) from
 XX a non-human mammal at least 10 times stronger than for the wild type Ab
 XX against the Ag. The mutant antibodies are particularly intended for
 XX administration to a non-human mammal in preclinical studies (e.g. of
 XX infection, immunity, haematopoiesis or transplantation). They can also be
 XX used diagnostically (to identify specific proteins) or therapeutically,
 XX e.g. where directed against CD11a (lymphocyte function-associated antigen
 XX -1) or intercellular adhesion molecule-1 against a wide variety of
 XX inflammatory or autoimmune diseases, malignancies, transplant rejection,
 XX human immune deficiency virus infection and tumour cell invasion.
 XX Conversion to the mutant form allows useful antibodies to be produced
 XX from antibodies which normally have affinity for non-human analogues of
 XX the Ag too low to be of any use

 XX New humanized anti-CD11a antibody, useful for treating or preventing e.g.
 XX inflammation and transplant rejection, contains human heavy variable
 XX region complementarily determining regions.
 PS Claim 5; Fig 1; 38pp; English.
 XX The present invention describes a humanised anti-CD11a antibody (Ab) that
 XX binds specifically to the human CD11a I-domain. The Ab has anti-
 XX inflammatory, immunosuppressant, antitumour and antiviral activities. The
 XX Ab blocks lymphocyte adhesion associated antigen (LFA-1) which is
 XX involved in leucocyte adhesion associated with inflammatory and
 XX immunological responses. The Ab are used: (i) optionally when coupled to
 XX a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 XX function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 XX inflammatory bowel disease, eczema, systemic lupus erythematosus,
 XX rhinitis, leukaemia, viral infections and many others, also for
 XX inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
 XX tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
 XX to active anticancer agent; and (v) for affinity chromatography. The Ab
 XX retain about the same activity in adhesion and mixed lymphocyte response
 XX assays as the murine antibodies from which they are derived. The murine
 XX anti-CD11a antibody MEM24 has IC50 0.09 nM for preventing adhesion
 XX between Jurkat cells (expressing LFA-1) and normal epidermal
 XX keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 XX The fully humanized version of MEM24 had IC50 0.13 nM. The present
 XX sequence represents the light chain variable region of the humanised anti

 PT Humanized anti-CD11a antibody useful for treating lymphocyte function-
 PT associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
 PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.
 PS
 PS Claim 9; SEQ ID NO 2; 43bp; English.

The invention relates to a Humanised anti-cluster of differentiation
 (CD)11a antibody having specificity to human CD11a I-domain or CD11a with
 a kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 inhibition (IC50) (nm) value of not more than 1 nM in mixed lymphocyte
 response assay or for preventing adhesion of Jurkat cells to normal human
 epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 -1. Also included are a kit comprising the antibody and instructions for
 use to detect the CD11a protein, an isolated nucleic acid encoding the
 antibody, a vector comprising the nucleic acid, a host cell comprising
 the vector and producing the antibody by culturing the cell so that the
 antibody is expressed. The antibody binds to epitope MM24 on CD11a. The
 antibody is useful for determining the presence of CD11a protein and for
 treating lymphocyte function-associated antigen 1 mediated disorder such

CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is the light chain variable region (VL) of the humanised
 CC mouse anti-CD11a I domain monoclonal antibody MM24.

 PT New antibody mutant of a species-dependent antibody, useful for treating
 PT and preventing infectious diseases, psoriasis, inflammatory bowel
 PT disease, allergic conditions, autoimmune diseases, or cancer.
 PS Example; SEQ ID NO 2; 54bp; English.

The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful

for treating and preventing infectious diseases such as human immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin disease such as psoriasis, inflammatory bowel diseases such as Crohn's disease and ulcerative colitis, adult respiratory distress syndrome, allergic diseases such as eczema and asthma, autoimmune diseases such as rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes mellitus, Reynaud's syndrome, immunological diseases such as tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary disease (COPD), CNS inflammatory disorder, skin hypersensitivity disorders such as poison ivy and poison oak, B-cell malignancies such as chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host disease and cancer. The invention is also useful in gene therapy. The present sequence is humanised murine anti-human CD11a monoclonal antibody (MH24) Flab)-8 variable light chain protein. This sequence is used in the exemplification of the invention.

PT Purifying a protein, e.g. antibody or immunoadhesin, comprises reducing
XX the temperature of a composition subjected to protein A affinity
XX chromatography to 3-20 degrees C, where protein A leaching is reduced.

PS Disclosure; SEQ ID NO 5; 27pp; English.

XX The invention relates to a method of purifying a protein which comprises
CC a CH2/CH3 region by protein A affinity chromatography. The method
CC involves reducing the temperature of a composition comprising the protein
CC and one or more impurities subjected to protein A affinity chromatography
CC to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably
CC the protein is antibody. The antibody is selected from Trastuzumab,
CC humanized 2C4, humanized CD11a antibody, and humanized VEGF antibody.
CC Preferably, the antibody binds HER2 antigen, where the antibody is
CC Trastuzumab or humanized 2C4. The protein is an immunoadhesin,
CC specifically a TWE receptor immunoadhesin. The methods are useful for
CC purifying a protein, which comprises a CH2/CH3 region by protein A
CC affinity chromatography and for reducing leaching of protein A during
CC protein A affinity chromatography. The current sequence represents the
CC variable light chain amino acid sequence of CD11a.

PT
XX      Purifying target protein from mixture containing host cell protein
PT      involves subjecting mixture to non-affinity purification, high-
PT      performance tangential flow filtration and isolating purified protein.
PT
XX      Disclosure; SEQ ID NO 3; 77pp; English.
XX
XX      The invention relates to a method for purifying a target protein from a
XX      mixture containing a host cell protein. This method comprises subjecting
XX      the mixture to a non-affinity purification followed by high-performance
XX      tangential flow filtration (HPTFF) and isolating the protein in a purity
XX      containing less than 100 parts/million (ppm) of the host cell protein,
XX      where the method of the invention includes no affinity purification
XX      process. The method of the invention is useful for purifying a target
XX      protein from a mixture containing a host cell protein, and is useful for
XX      incorporating the isolated protein into a pharmaceutical formulation.
XX      Proteins purified using the method of the invention are useful in a
XX      pharmaceutical respect, and are also useful in various diagnostic and
XX      therapeutic purposes. The method of the invention is efficient in
XX      purifying a target protein from a mixture containing a host cell protein,
XX      and may also be effectively performed at low cost. The current sequence
XX      represents the anti-CD11a rhmAb light chain amino acid sequence. This
XX      particular protein was used to demonstrate the method of the invention.

PT
XX      New conjugates of nonproteaceous polymers with antibody fragments, used
PT      for treating inflammatory disorders.
PT
XX      Disclosure; Fig 29; 360pp; English.
XX
XX      The present invention describes a novel conjugate having one or more
XX      antibody fragments covalently attached to one or more nonproteaceous
XX      polymer molecules, where the apparent size of the conjugate is at least
XX      about 500 kDa. Conjugates of antibody fragments which bind the human
XX      interleukin (IL) 8 with a nonproteaceous polymer can be used for
XX      treating inflammatory disorders e.g. acute lung injury, ischemic
XX      reperfusion disorder, and autoimmune diseases. They can also be used for
XX      treating e.g. inflammatory skin diseases including psoriasis and atopic
XX      dermatitis, systemic scleroderma and sclerosis, and aetmatic diseases.
XX      The conjugates can also be used as reagents in an animal model system for
XX      in vivo study of the biological functions of the antigen recognised by
XX      the conjugate. The present sequence represents the human light chain
XX      kappa-I consensus framework from the present invention

XX PT New nucleic acid molecule encodes a polypeptide which is an anti-
XX PT interleukin-8 monoclonal antibody or antibody fragment useful for the
XX PT production of anti-interleukin-8 monoclonal antibodies or fragments.
XX PS Example; Fig 29; 188pp; English.
XX CC The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody
XX CC (MAb). The anti-IL-8 MAb comprises a sequence containing the CDRs
XX CC (complementarity determining regions) of the humanized anti-IL-8
XX CC 6G4.2.SV1LN35A light chain; and amino acids 24-253 of the humanized anti-
XX CC IL-8 6G4.2.SV1LN35A heavy chain. The anti-IL-8 MAb and fragments can be
XX CC used in diagnosis, for affinity purification of IL-8 from recombinant
XX CC cell culture or natural sources and for the treatment of inflammatory
XX CC disorders e.g. adult respiratory distress syndrome. Nucleic acids
XX CC encoding the anti-IL-8 MAb can be associated in a vector with another
XX CC gene encoding another protein or protein fragment to produce a fusion
XX CC protein which can make isolation and/or purification of the protein an
XX CC easier process

 XX
 XX Treating acute lung injury in mammal by administering to mammal a 500 kD
 PT conjugate comprising F(ab')₂ antibody fragment that binds to human
 PT interleukin-8, covalently attached to one or two polyethylene glycol
 PT molecules.
 XX
 XX Example G; Fig 29; 259pp; English.
 XX
 CC The invention relates to treating acute lung injury in a mammal,
 CC comprising administering to the mammal an effective amount of a conjugate
 CC of a single antibody fragment covalently attached to 1 or 2 polyethylene
 CC glycol (PEG) molecules, where the antibody fragment is a F(ab')₂
 CC comprising: (a) first chain that is either a light chain or a heavy chain
 CC ; (b) a first opposite chain that is either a light chain opposite the
 CC first light chain or a light chain opposite the first heavy chain; (c) a
 CC second chain that is either a light chain or a heavy chain; and (d) a
 CC second opposite chain that is either a heavy chain opposite the second
 CC light chain or a light chain opposite the second heavy chain; where every
 CC PEG molecule is covalently attached to a first cysteine residue in the
 CC first or second chain that would ordinarily form a disulphide bridge with
 CC a second cysteine residue in the first or second opposite chain, where
 CC the disulphide bridge is avoided by substitution of another amino acid
 CC residue for the second cysteine residue in the first or second opposite
 CC chain, where the F(ab')₂ comprises an antigen binding site that binds to
 CC human interleukin-8 (IL-8), and where the apparent size of the conjugate
 CC is at least about 500 kD. The antigen binding sites may be derived from
 CC murine monoclonal antibodies 5.12.14 or 6G4.2.5. The method is useful for
 CC treating lung injury, including adult respiratory distress syndrome
 CC (ARDS) in a mammal and inflammatory diseases (such as asthma,
 CC inflammatory bowel disease, psoriasis and sclerosis), ischaemic
 CC reperfusion disorders, stroke, multiple sclerosis, meningitis,
 CC osteoarthritis, septic shock, autoimmune disease (e.g. Rheumatoid
 CC arthritis), alcoholic hepatitis, cystic fibrosis and many other diseases
 CC and disorders listed in the specification. The present sequence
 CC represents a human antibody sequence included for comparison with the
 CC mouse humanised monoclonal antibody sequences

 XX
 XX Treating inflammatory disorder in a mammal, involves administering a
 PT conjugate of polyethylene glycol and a single antibody fragment
 PT comprising antigen binding site that binds to human interleukin-8, to
 PT mammal.
 XX
 XX Example 3G; Fig 29; 259pp; English.
 XX
 CC The invention relates to treating an inflammatory disorder in a mammal,
 CC comprising administering to the mammal, an effective amount of a
 CC conjugate of a single antibody fragment (e.g. the heavy or light chains
 CC of the humanised mouse monoclonal antibodies 5.12.14 and 6G4.2.5, which
 CC also have their intramolecular disulphide bridges ablated by substitution
 CC mutations) covalently attached to one or two polyethylene glycol (PEG)
 CC molecules. The antibodies comprise an antigen binding site that binds to
 CC human interleukin-8 (IL-8), and the apparent size of the conjugate is at
 CC least 500 kDa. The method is useful for treating an inflammatory disorder
 CC e.g. ischaemic reperfusion disorder such as surgical tissue reperfusion
 CC injury, myocardial ischaemia or myocardial infarction, or hypovolemic
 CC shock, in a mammal e.g. human. The method is useful for treating
 CC inflammatory disorders including psoriasis, atopic dermatitis, systemic
 CC scleroderma and sclerosis, responses associated with inflammatory bowel
 CC disease, ischaemic reperfusion disorders, myocardial ischaemic
 CC conditions, cerebral oedema secondary to stroke, cranial trauma,
 CC asphyxia, adult respiratory distress syndrome, acute lung injury,
 CC Behcet's disease, dermatomyositis, polymyositis, multiple sclerosis,
 CC meningitis, meningitis, encephalitis, uveitis, osteoarthritis, lupus
 CC nephritis, autoimmune diseases such as rheumatoid arthritis, Sjogren's
 CC syndrome, vasculitis, central nervous system inflammatory disorder,
 CC multiple organ injury syndrome secondary to septicaemia or trauma,
 CC alcoholic hepatitis, bacterial pneumonia, antigen-antibody complex
 CC mediated diseases including glomerulonephritis, sepsis, sarcoidosis,
 CC immunopathologic responses to tissue/organ transplantation, inflammations
 CC of the lung, inflammatory bowel disease such as ulcerative colitis and
 CC asthma. The present sequence represents the light or heavy chain of human
 CC IgG, used to design the humanising mutations in the two mouse antibodies

PT Vaccines against conformation-dependent or non-peptide antigens, based on
PT DNA encoding peptide which mimics the antigen, useful e.g. as antitumor
PT vaccines.
XX
PS Disclosure; Page 5-9; 36pp; German.
XX
CC This invention describes a novel vaccine (V1) against conformation-
CC dependent antigens (CDA) comprising DNA (I) and/or an antibody, or
CC peptide which immunologically imitates CDA, is new. (I) encodes a region
CC of an antidiabetic antibody (Ab2) or another peptide which: (a)
CC specifically binds to the binding site of an antibody (Ab1) or an antigen
CC binding molecule; and (b) immunologically mimics the initial antigen. The
CC immunogenic structure defined by a specific spatial conformation of amino
CC acids. (I) is used in the form of linear or circular naked DNA and/or
CC with a viral vector and/or adjuvants. The products of the invention have
CC cytostatic, virucidal, antibacterial and antiparasitic. The invention
CC also describes (1) a corresponding vaccine (V2) against antigens which
CC are not proteins or peptides, as defined above but which have epitopes
CC which show an immunogenic structure; (2) preparing (V1) and (V2); (3)
CC human antidiabetic antibody fragments against the MUC1-conformation
CC epitope having one of 31 approximately 60 residue amino acids sequences,
CC all fully defined in the specification; (4) MUC1-conformation epitope
CC mimics having one of 16 9-17 residue amino acid sequences, all fully in
CC the specification; (5) antidiabetic antibody fragments against the TF
CC antigen having one of 24 approximately 200 residue amino acid sequences,
CC fully defined in the specification; (6) TF carbohydrate epitope mimics
CC having one of 25 7-13 residue amino acid sequences, all fully defined in
CC the specification; and (7) DNA sequences encoding the fragments and
CC derivatives defined in (3), (4), (5), or (6). (V1) and (V2) are used to treat
CC cancer, and infectious diseases, e.g. caused by prions, viruses, bacteria
CC and parasites. The vaccines are effective in cases where vaccination has
CC previously not been possible

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Mutants of species-dependent antibodies with affinity for non-human
mammalian antigen - greater than for parent antibody, particularly used
for pre-clinical trial(s) in rhesus monkey(s) of therapeutic antibodies
directed against CD11a.
Disclosure; Page 55; 71pp; English.

This sequence represents the heavy chain of the humanised antibody MHM24,
and was used to produce a mutant of the invention. The mutants are of a
species-dependent antibody (Ab), and have an amino acid substitution in a
variable region of the Ab, and binding affinity for an antigen (Ag) from
a non-human mammal at least 10 times stronger than for the wild type Ab
against the Ag. The mutant antibodies are particularly intended for
administration to a non-human mammal in preclinical studies (e.g. of
infection, immunity, haematopoiesis or transplantation). They can also be
used diagnostically (to identify specific proteins) or therapeutically,
e.g. where directed against CD11a (lymphocyte function-associated antigen
-1) or intercellular adhesion molecule-1 against a wide variety of
inflammatory or autoimmune diseases, malignancies, transplant rejection,
CC human immune deficiency virus infection and tumour cell invasion.
Conversion to the mutant form allows useful antibodies to be produced

CC from antibodies which normally have affinity for non-human analogues of
CC the Ag too low to be of any use

New humanised anti-CD11a antibody, useful for treating or preventing e.g.
inflammation and transplant rejection, contains human heavy variable
region complementarity determining regions.
Claim 1; Fig 1; 38pp; English.

The present invention describes a humanised anti-CD11a antibody (Ab) that
binds specifically to the human CD11a I-domain. The Ab has anti-
inflammatory, immunosuppressant, antitumour and antiviral activities. The
Ab blocks lymphocyte adhesion associated with inflammatory and
involved in leucocyte function-associated antigen (LFA-1) which is
CC immunological responses. The Ab are used: (i) optionally when coupled to
CC a cytotoxicin, to treat or prevent disorders mediated by lymphocyte
CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
CC thinitis, leukaemia, viral infections and many others, also for
CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs

CC to active anticancer agent; and (v) for affinity chromatography. The Ab
 CC retain about the same activity in adhesion and mixed lymphocyte response
 CC assays as the murine antibodies from which they are derived. The murine
 CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing LFA-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanized version of MHM24 had IC50 0.13 nM. The present
 CC sequence represents the heavy chain variable region of the humanised anti-
 CC CD11a Ab

XX Humanized anti-CD11a antibody useful for treating lymphocyte function-
 PT associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
 PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.

XX Claim 7; SEQ ID NO 5; 43pp; English.

XX The invention relates to a Humanised anti-cluster of differentiation

CC (CD)11a antibody having specificity to human CD11a I-domain or CD11a with
 CC a Kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (nM) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the nucleic acid, a host cell comprising
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The
 CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC produg activating enzyme, or as an affinity purification agent. The
 CC present sequence is the heavy chain variable region (VH) of the humanised
 CC mouse anti-CD11a I domain monoclonal antibody MHM24.

XX

```

PS Disclosure; SEQ ID NO 6; 27pp; English.
XX
CC The invention relates to a method of purifying a protein which comprises
CC a CH2/CH3 region by protein A affinity chromatography. The method
CC involves reducing the temperature of a composition comprising the protein
CC and one or more impurities subjected to protein A affinity chromatography
CC to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably
CC the protein is antibody. The antibody is selected from Trastuzumab,
CC humanized 2C4, humanized CD1a antibody, and humanized VEGF antibody.
CC Preferably, the antibody binds HER2 antigen, where the antibody is
CC Trastuzumab or humanized 2C4. The protein is an immunoadhesin.
CC Specifically a TNF receptor immunoadhesin. The methods are useful for
CC purifying a protein, which comprises a CH2/CH3 region by protein A
CC affinity chromatography and for reducing leaching of protein A during
CC protein A affinity chromatography. The current sequence represents the
CC variable heavy chain amino acid sequence of CD1a.

PT Purifying target protein from mixture containing host cell protein
PT involves subjecting mixture to non-affinity purification, high-
PT performance tangential flow filtration and isolating purified protein.
XX
PS Disclosure; SEQ ID NO 4; 77pp; English.
XX
CC The invention relates to a method for purifying a target protein from a

CC mixture containing a host cell protein. This method comprises subjecting
CC the mixture to a non-affinity purification followed by high-performance
CC tangential flow filtration (HPRFF) and isolating the protein in a purity
CC containing less than 100 parts/million (ppm) of the host cell protein,
CC where the method of the invention includes no affinity purification
CC process. The method of the invention is useful for purifying a target
CC protein from a mixture containing a host cell protein, and is useful for
CC incorporating the isolated protein into a pharmaceutical formulation.
CC Protein purified using the method of the invention are useful in a
CC pharmaceutical respect, and are also useful in various diagnostic and
CC therapeutic purposes. The method of the invention is efficient in
CC purifying a target protein from a mixture containing a host cell protein,
CC and may also be effectively performed at low cost. The current sequence
CC represents the anti-CD1a rhumab heavy chain amino acid sequence. This
CC particular protein was used to demonstrate the method of the invention.

PT New humanised anti-CD1a antibody - used in immunoassays for CD1a, and
PT also to treat conditions such as immunological or inflammatory disease.
XX
PS Disclosure; Page 56; 66pp; English.
XX
CC The present sequence represents the heavy chain of a "rhesusised" (sic)

CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
 CC involved in leucocyte adhesion associated with inflammatory and
 CC immunological responses. The Ab are used: (i) optionally when coupled to
 CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
 CC rhinitis, leukemia, viral infections and many others, also for
 CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
 CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
 CC to active anticancer agent; and (v) for affinity chromatography. The Ab
 CC retain about the same activity in adhesion and mixed lymphocyte response
 CC assays as the murine antibodies from which they are derived. The murine
 CC anti-CD11a antibody MM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing ICAM-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanized version of MM24 had IC50 0.13 nM. The present
 CC sequence represents the amino acid sequence of a rhesusised antibody
 CC mutant heavy chain, which is used in the exemplification of the present
 CC invention

DR Humanized anti-CD11a antibody useful for treating lymphocyte function-
 XX associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
 PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.

XX Example; SEQ ID NO 24; 43pp; English.

XX The invention relates to a Humanised anti-cluster of differentiation
 CC (CD)11a antibody having specificity to human CD11a I-domain or CD11a with
 CC a Kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (nM) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the nucleic acid, a host cell comprising
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MM24 on CD11a. The
 CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is the light chain of a rhesusised anti-CD11a antibody of
 CC the invention.

 PT New antibody mutant of a species-dependent antibody, useful for treating
 PT and preventing infectious diseases, psoriasis, inflammatory bowel
 PT disease, allergic conditions, autoimmune diseases, or cancer.
 XX
 PS Example; SEQ ID NO 17; 54pp; English.
 XX
 CC The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful
 CC for treating and preventing infectious diseases such as human
 CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 CC disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 CC disease and ulcerative colitis, adult respiratory distress syndrome,
 CC allergic diseases such as eczema and asthma, autoimmune diseases such as
 CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 CC mellitus, Reynaud's syndrome, immunological diseases such as
 CC tuberculosis, sarcoidosis, polyomyelitis and chronic obstructive pulmonary
 CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is the substituted murine anti-human CD11a monoclonal
 CC antibody (MHM24) variable heavy chain protein. This sequence is used in
 CC the exemplification of the invention.

 PT New conjugates of nonproteaceous polymers with antibody fragments, used
 PT for treating inflammatory disorders.
 XX
 PS Disclosure; Fig 29; 360pp; English.
 XX
 CC The present invention describes a novel conjugate having one or more
 CC antibody fragments covalently attached to one or more nonproteaceous
 CC polymer molecules, where the apparent size of the conjugate is at least
 CC about 500 kDa. Conjugates of antibody fragments which bind the human
 CC interleukin (IL) 8 with a nonproteaceous polymer can be used for
 CC treating inflammatory disorders e.g. acute lung injury, ischaemic
 CC reperfusion disorder, and autoimmune diseases including psoriasis and atopic
 CC dermatitis, systemic scleroderma and sclerosis, and asthmatic diseases.
 CC The conjugates can also be used as reagents in an animal model system for
 CC in vivo study of the biological functions of the antigen recognised by
 CC the conjugate. The present sequence represents the human IgG1 subgroup
 CC III heavy chain variable domain form the present invention

PT New nucleic acid molecule encodes a polypeptide which is an anti-
PT interleukin-8 monoclonal antibody or antibody fragment useful for the
PT production of anti-interleukin-8 monoclonal antibodies or fragments.
XX
XX
PS Example; Fig 29; 188pp; English.
XX
XX
CC The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody
CC (MAB). The anti-IL-8 MAB comprises a sequence containing the CDRs
CC (complementarity determining regions) of the humanized anti-IL-8
CC 6G4.2.5V1IN35A light chain; and amino acids 24-253 of the humanized anti-
CC IL-8 6G4.2.5V1IN35A heavy chain. The anti-IL-8 MABs and fragments can be
CC used in diagnosis, for affinity purification of IL-8 from recombinant
CC cell culture or natural sources and for the treatment of inflammatory
CC disorders e.g. adult respiratory distress syndrome. Nucleic acids
CC encoding the anti-IL-8 MAb can be associated in a vector with another
CC gene encoding another protein or protein fragment to produce a fusion
CC protein which can make isolation and/or purification of the protein an
CC easier process

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 XX Claim 6; Page 2; 66pp; English.
 CC AAW62010-12 represent complementarity determining regions of the heavy
 CC chain variable region of humanised antibody MHM24F(ab)-8. The fragments
 CC were used to make a humanised anti-CD11a antibody that binds specifically

CC to the human CD11a I domain (MHM24 epitope). CD11a refers to the alpha
 CC subunit of lymphocyte function-associated antigen 1 (LFA-1) from any
 CC mammal. The humanised anti-CD11a antibodies are used to determine
 CC presence of CD11a in usual immunoassays or by in vivo imaging,
 CC particularly for diagnosis of CD11a-associated diseases (typically immune
 CC responses and inflammation such as psoriasis, Crohn's disease, rheumatoid
 CC arthritis, transplant rejection, leukaemia, etc

XX New humanized anti-CD11a antibody, useful for treating or preventing e.g.
 PT inflammation and transplant rejection, contains human heavy variable
 PT region complementarity determining regions.
 XX Claim 1; Col 55-56; 38pp; English.

XX The present invention describes a humanised anti-CD11a antibody (Ab) that
 CC binds specifically to the human CD11a I-domain. The Ab has anti-
 CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
 CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
 CC involved in leucocyte adhesion associated with inflammatory and
 CC immunological responses. The Ab are used: (i) optionally when coupled to
 CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
 CC rhinitis, leukaemia, viral infections and many others, also for
 CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
 CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
 CC to active anticancer agent; and (v) for affinity chromatography. The Ab
 CC retain about the same activity in adhesion and mixed lymphocyte response
 CC assays as the murine antibodies from which they are derived. The murine

CC for treating and preventing infectious diseases such as human
 CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 CC disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 CC disease and ulcerative colitis, adult respiratory distress syndrome,
 CC allergic diseases such as eczema and asthma, autoimmune diseases such as
 CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 CC mellitus, Reynaud's syndrome, immunological diseases such as
 CC tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary
 CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is humanised murine anti-human CD11a monoclonal antibody
 CC (MHM24) CDR-H1 peptide. This sequence is used in the exemplification of
 CC the invention.

 XX
 PS Claim 13; Page 59-60; 71pp; English.
 XX
 XX This sequence represents the heavy chain variable domain of a mutant
 CC murine antibody MHM24 of the invention. The mutants are of a species-
 CC dependent antibody (Ab), and have an amino acid substitution in a
 CC variable region of the Ab, and binding affinity for an antigen (Ag) from
 CC a non-human mammal at least 10 times stronger than for the wild type Ab
 CC against the Ag. The mutant antibodies are particularly intended for
 CC administration to a non-human mammal in preclinical studies (e.g. of
 CC infection, immunity, haematopoiesis or transplantation). They can also be
 CC used diagnostically (to identify specific proteins) or therapeutically,
 CC e.g. where directed against CD11a (lymphocyte function-associated antigen
 CC -1) or intercellular adhesion molecule-1 against a wide variety of
 CC inflammatory or autoimmune diseases, malignancies, transplant rejection,
 CC human immune deficiency virus infection and tumour cell invasion.
 CC Conversion to the mutant form allows useful antibodies to be produced
 CC from antibodies which normally have affinity for non-human analogues of
 CC the Ag too low to be of any use

XX    MPI; 2000-282241/24.
XX    New humanized anti-CD11a antibody, useful for treating or preventing e.g.
XX    inflammation and transplant rejection, contains human heavy variable
XX    region complementarity determining regions.
XX    Claim 1; Fig 1; 38pp; English.
XX    The present invention describes a humanised anti-CD11a antibody (Ab) that
XX    binds specifically to the human CD11a I-domain. The Ab has anti-
XX    inflammatory, immunosuppressant, antitumour and antiviral activities. The
XX    Ab blocks lymphocyte function-associated antigen (LFA-1) which is
XX    involved in leucocyte adhesion associated with inflammatory and
XX    immunological responses. The Ab are used: (i) optionally when coupled to
XX    a cytotoxin, to treat or prevent disorders mediated by lymphocyte
XX    function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
XX    inflammatory bowel disease, eczema, systemic lupus erythematosus,
XX    rhinitis, leukaemia, viral infections and many others, also for
XX    inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
XX    tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
XX    to active anticancer agent; and (v) for affinity chromatography. The Ab
XX    retain about the same activity in adhesion and mixed lymphocyte response
XX    assays as the murine antibodies from which they are derived. The murine
XX    anti-CD11a antibody MEM24 has IC50 0.09 nM for preventing adhesion
XX    between Jurkat cells (expressing LFA-1) and normal epidermal
XX    keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
XX    The fully humanized version of MEM24 had IC50 0.13 nM. The present
XX    sequence represents the heavy chain variable region of the humanised anti
XX    -CD11a Ab

PS
XX
XX The invention relates to a method of purifying a protein which comprises
CC a CH2/CH3 region by protein A affinity chromatography. The method
CC involves reducing the temperature of a composition comprising the protein
CC and one or more impurities subjected to protein A affinity chromatography
CC to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably
CC the protein is antibody. The antibody is selected from Trastuzumab,
CC humanized 2C4, humanized CD11a antibody, and humanized VEGF antibody.
CC Preferably, the antibody binds HER2 antigen, where the antibody is
CC Trastuzumab or humanized 2C4. The protein is an immunoadhesin,
CC specifically a TNP receptor immunoadhesin. The methods are useful for
CC purifying a protein, which comprises a CH2/CH3 region by protein A
CC affinity chromatography and for reducing leaching of protein A during
CC protein A affinity chromatography. The current sequence represents the
CC variable heavy chain amino acid sequence of CD11a.

XX Purifying target protein from mixture containing host cell protein
PT involves subjecting mixture to non-affinity purification, high-
PT performance tangential flow filtration and isolating purified protein.
XX
XX Disclosure; SEQ ID NO 4; 77pp; English.
PS
XX
XX The invention relates to a method for purifying a target protein from a
CC mixture containing a host cell protein. This method comprises subjecting
CC

CC the mixture to a non-affinity purification followed by high-performance
 CC tangential flow filtration (HPTF) and isolating the protein in a purity
 CC containing less than 100 parts/million (ppm) of the host cell protein,
 CC where the method of the invention includes no affinity purification
 CC process. The method of the invention is useful for purifying a target
 CC protein from a mixture containing a host cell protein, and is useful for
 CC incorporating the isolated protein into a pharmaceutical formulation.
 CC Proteins purified using the method of the invention are useful in a
 CC pharmaceutical respect, and are also useful in various diagnostic and
 CC therapeutic purposes. The method of the invention is efficient in
 CC purifying a target protein from a mixture containing a host cell protein,
 CC and may also be effectively performed at low cost. The current sequence
 CC represents the anti-CD14 rhumb heavy chain amino acid sequence. This
 CC particular protein was used to demonstrate the method of the invention.

 CC PT New antibody mutant of a species-dependent antibody, useful for treating
 CC PT and preventing infectious diseases, psoriasis, inflammatory bowel
 CC PT disease, allergic conditions, autoimmune diseases, or cancer.

XX Example; SEQ ID NO 21; 54pp; English.
 PS
 CC The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful
 CC for treating and preventing infectious diseases such as human
 CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 CC disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 CC disease and ulcerative colitis, adult respiratory distress syndrome,
 CC allergic diseases such as eczema and asthma, autoimmune diseases such as
 CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 CC mellitus, Reynaud's syndrome, immunological diseases such as
 CC tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary
 CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is humanised murine anti-human CD14 monoclonal antibody
 CC (MEM24) CDR-H1 mutant peptide. This sequence is used in the
 CC exemplification of the invention.

 CC
 CC PT New conjugates of nonproteinaceous polymers with antibody fragments, used
 CC PT for treating inflammatory disorders.
 CC
 CC PS Disclosure; Fig 29; 360pp; English.
 CC
 CC CC The present invention describes a novel conjugate having one or more
 CC CC antibody fragments covalently attached to one or more nonproteinaceous
 CC CC polymer molecules, where the apparent size of the conjugate is at least

about 500 kDa. Conjugates of antibody fragments which bind the human interleukin (IL) 8 with a nonproteinaceous polymer can be used for treating inflammatory disorders e.g. acute lung injury, ischemic reperfusion disorder, and autoimmune diseases. They can also be used for treating e.g. inflammatory skin diseases including psoriasis and atopic dermatitis, systemic scleroderma and sclerosis, and asthmatic diseases. The conjugates can also be used as reagents in an animal model system for in vivo study of the biological functions of the antigen recognised by the conjugate. The present sequence represents the human IgG1 subgroup III heavy chain variable domain form the present invention

PT New nucleic acid molecule encodes a polypeptide which is an anti-interleukin-8 monoclonal antibody or antibody fragment useful for the production of anti-interleukin-8 monoclonal antibodies or fragments.

XX Example; Fig 29; 188pp; English.

XX The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody (Mab). The anti-IL-8 Mab comprises a sequence containing the CDRs (complementarity determining regions) of the humanized anti-IL-8 6G4.2.SV1IN35A light chain; and amino acids 24-253 of the humanized anti-IL-8 6G4.2.SV1IN35A heavy chain. The anti-IL-8 Mabs and fragments can be used in diagnosis, for affinity purification of IL-8 from recombinant cell culture or natural sources and for the treatment of inflammatory disorders e.g. adult respiratory distress syndrome. Nucleic acids encoding the anti-IL-8 Mab can be associated in a vector with another gene encoding another protein or protein fragment to produce a fusion protein which can make isolation and/or purification of the protein an easier process

 PT Treating acute lung injury in mammal by administering to mammal a 500 kD
 PT conjugate comprising F(ab')₂ antibody fragment that binds to human
 PT interleukin-8, covalently attached to one or two polyethylene glycol
 PT molecules.
 XX
 PS Example G; Fig 29; 2599P; English.
 XX
 CC The invention relates to treating acute lung injury in a mammal,
 CC comprising administering to the mammal an effective amount of a conjugate
 CC of a single antibody fragment covalently attached to 1 or 2 polyethylene
 CC glycol (PEG) molecules, where the antibody fragment is a F(ab')₂
 CC comprising: (a) first chain that is either a light chain or a heavy chain
 CC ; (b) a first opposite chain that is either a heavy chain opposite the
 CC first light chain or a light chain opposite the first heavy chain; (c) a
 CC second chain that is either a light chain or a heavy chain; and (d) a
 CC second opposite chain that is either a heavy chain opposite the second
 CC light chain or a light chain opposite the second heavy chain; where every
 CC PEG molecule is covalently attached to a first cysteine residue in the
 CC first or second chain that would ordinarily form a disulphide bridge with
 CC a second cysteine residue in the first or second opposite chain, where
 CC the disulphide bridge is avoided by substitution of another amino acid
 CC residue for the second cysteine residue in the first or second opposite
 CC chain, where the F(ab')₂ comprises an antigen binding site that binds to
 CC human interleukin-8 (IL-8), and where the apparent size of the conjugate
 CC is at least about 500 kD. The antigen binding sites may be derived from
 CC murine monoclonal antibodies 5.12.14 or 6G4.2.5. The method is useful for
 CC treating lung injury, including adult respiratory distress syndrome
 CC (ARDS) in a mammal and inflammatory diseases (such as ashma,
 CC inflammatory bowel disease, psoriasis and sclerostis), ischaemic
 CC reperfusion disorders, stroke, multiple sclerosis, meningitis,
 CC osteoarthritis, septic shock, autoimmune disease (e.g. rheumatoid
 CC arthritis), alcoholic hepatitis, cystic fibrosis and many other diseases
 CC and disorders listed in the specification. The present sequence
 CC represents a human antibody sequence included for comparison with the
 CC mouse humanised monoclonal antibody sequences

 DR
 PT Treating inflammatory disorder in a mammal, involves administering a
 PT conjugate of polyethylene glycol and a single antibody fragment
 PT comprising antigen binding site that binds to human interleukin-8, to
 PT mammal.
 XX
 XX Example 3G; Fig 29; 2599P; English.
 PS
 CC The invention relates to treating an inflammatory disorder in a mammal,
 CC comprising administering to the mammal, an effective amount of a
 CC conjugate of a single antibody fragment (e.g. the heavy or light chains
 CC of the humanised mouse monoclonal antibodies 5.12.14 and 6G4.2.5, which
 CC also have their intramolecular disulphide bridges ablated by substitution
 CC mutations) covalently attached to one or two polyethylene glycol (PEG)
 CC molecules. The antibodies comprise an antigen binding site that binds to
 CC human interleukin-8 (IL-8), and the apparent size of the conjugate is at
 CC least 500 kDa. The method is useful for treating an inflammatory disorder
 CC e.g. ischaemic reperfusion disorder such as surgical tissue reperfusion
 CC injury, myocardial ischaemia or myocardial infarction, or hypovolemic
 CC shock, in a mammal e.g. human. The method is useful for treating
 CC inflammatory disorders including psoriasis, atopic dermatitis, systemic
 CC scleroderma and sclerosis, responses associated with inflammatory bowel
 CC disease, ischaemic reperfusion disorders, myocardial ischaemic
 CC conditions, cerebral oedema secondary to stroke, cranial trauma,
 CC asphyxia, adult respiratory distress syndrome, acute lung injury,
 CC Behcet's disease, dermatomyositis, polymyositis, multiple sclerosis,
 CC dermatitis, meningitis, encephalitis, uveitis, osteoarthritis, lupus
 CC nephritis, autoimmune diseases such as rheumatoid arthritis, Sjogren's
 CC syndrome, vasculitis, central nervous system inflammatory disorder,
 CC multiple organ injury syndrome secondary to septicemia or trauma,

CC alcoholic hepatitis, bacterial pneumonia, antigen-antibody complex
CC mediated diseases including glomerulonephritis, sepsis, sarcoidosis,
CC immunopathologic responses to tissue/organ transplantation, inflammations
CC of the lung, inflammatory bowel disease such as ulcerative colitis and
CC asthma. The present sequence represents the light or heavy chain of human
CC IgG, used to design the humanising mutations in the two mouse antibodies

New antibody mutant of a species-dependent antibody, useful for treating
 and preventing infectious diseases, psoriasis, inflammatory bowel
 disease, allergic conditions, autoimmune diseases, or cancer.

Example; SEQ ID NO 24; 5app; English.

The present invention relates to an antibody mutant of a species-
 dependent antibody with beneficial properties. The invention is useful
 for treating and preventing infectious diseases such as human
 immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 disease and ulcerative colitis, adult respiratory distress syndrome,
 allergic diseases such as eczema and asthma, autoimmune diseases such as
 rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 mellitus, Reynaud's syndrome, immunological diseases such as
 tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary

CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is humanised murine anti-human CD11a monoclonal antibody
 CC (MEM24) CDR-H1 mutant peptide. This sequence is used in the
 CC exemplification of the invention.

Novel antibody that specifically binds and neutralizes botulinum
 neurotoxin type A useful for neutralizing botulinum neurotoxin and
 treating botulism.

Claim 6; Page 22; 31pp; English.

The invention relates to an isolated antibody that specifically binds to
 an epitope specifically bound by an antibody expressed by a clone such as
 CC clone S25, C25, C39, IC6 and clone 1f3, where the antibody binds to and
 CC neutralises botulinum neurotoxin type A (BONT/A). Also included are a
 CC polypeptide comprising BONT/A neutralising epitope comprising an epitope
 CC which is specifically bound by the antibody, where the polypeptide is not
 CC a full-length botulinum neurotoxin H c fragment and making an anti-BONT/A
 CC antibody that neutralises BONT/A (by contacting several antibodies with
 CC an epitope specifically bound by an antibody expressed by any of the
 CC novel clones and isolating an antibody that specifically binds to the
 CC epitope). The antibody is useful for neutralising a BONT/A, by contacting
 CC botulinum neurotoxin type A with the antibody comprising VH CDR (heavy
 CC chain variable region complementarity determining region) and with a
 CC second anti-BONT/A antibody which comprises a VH CDR, where the second
 CC antibody binds to a different epitope than the first anti-BONT/A
 CC antibody. The antibody is useful in the treatment of pathologies
 CC associated with botulinum neurotoxin poisoning, for rapid

CC detection/diagnosis of botulism and in the detection and/or
CC quantification of BoNT/A in a biological sample obtained from an organism
CC which is indicative of a Clostridium botulinum infection of the organism.
CC The present sequence is a heavy chain variable region (VH) of a single
CC chain antibody (scFv) of the invention

 XX New antibodies that specifically bind to cancer antigen MUC-1, useful for
 PT tumor targeting, for inhibiting the growth or proliferation of cancer
 PT cells or as diagnostic agents to identify tumors and monitor levels of
 PT circulating antigen.
 PS Claim 6; SEQ ID NO 13; 79pp; English.
 XX The invention provides novel antibodies that specifically bind to the MUC
 CC -1 cancer antigen. Preferred single chain antibodies were obtained from a
 CC phage display library and were designated as 12B, 3D, A5, C4, B5, B1 and
 CC B9 ADZ21537-ADZ21543. The heavy chain variable regions (VH) and light
 CC chain variable regions (VL) of these antibodies are also provided
 CC ADZ21533-ADZ21536. The VH and VL domains govern the specificity and
 CC binding affinity of the antibodies and permit the construction of a
 CC variety of antibodies that specifically target the MUC-1 antigen and
 CC cells bearing/displaying the antigen. The antibodies are useful targeting
 CC moieties for specifically directing imaging agents and various
 CC therapeutic moieties to a cancer. A claimed method of inhibiting the
 CC growth or proliferation of a cell bearing a MUC-1 antigen comprises
 CC contacting the cell with a chimeric molecule comprising an anti-MUC-1
 CC antibody attached to a cytotoxicin, a radionuclide, a liposome comprising
 CC an anti-cancer drug, a prodrug or an anti-cancer drug. The present
 CC sequence is that of the VH region of single chain antibody B9 ADZ21543.

 CC -beta-6 to latency associated peptide (LAP) with an IC50 value lower than
 CC that of 10D5. Also described: (1) an anti-alpha-v-beta-6 antibody
 CC comprising heavy chain complementarity determining regions (CDR) 1, 2,
 CC and 3, or a heavy and light chain variable domain sequence; (2) a
 CC monoclonal antibody that specifically binds to alpha-v-beta-6 but does
 CC not inhibit binding of alpha-v-beta-6 to LAP; (3) a composition for
 CC preventing or treating a disease mediated by alpha-v-beta-6 in a mammal
 CC subject having or at risk of having a disease mediated by alpha-v-beta-6
 CC by administering to the subject the composition described above, and so
 CC alleviating or postponing the onset of the disease; (5) a method of
 CC detecting alpha-v-beta-6 in a tissue sample by contacting the tissue
 CC sample with the antibody; and (6) a cell hybridoma 6.1A8, 6.3G9, 6.8G6,
 CC 6.2B1, 7.1G10, 7.7G5, or 7.1Cr, which respectively comprises American
 CC Type Culture Collection (ATCC) Accession number PTA-3647, PTA-3649, PTA-
 CC 3643, PTA-3646, PTA-3896, PTA-3899, or PTA-3900. (1) has cytostatic,
 CC dermatological, vulnery, hepatotropic, and immunosuppressive activities,
 CC and can be used in vaccines. The antibodies, compositions and methods of
 CC the present invention can be used for preventing or treating a disease
 CC mediated by alpha-v-beta-6, e.g. fibrosis such as scleroderma, scarring,
 CC liver fibrosis, kidney fibrosis or lung fibrosis; psoriasis; cancer,
 CC preferably epithelial cancer, oral, skin, cervical, pharyngeal,
 CC laryngeal, oesophageal, lung, breast, kidney or colorectal cancer; or
 CC Alport's syndrome. The present sequence is used in the exemplification of
 CC the present invention.

 XX
 CC The invention describes an isolated antibody (I) that specifically binds
 CC to an epitope specifically bound by an antibody expressed by a specific
 CC clone where (1) binds to and neutralises botulinum neurotoxin type A
 CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope
 CC specifically bound by an antibody expressed by a clone chosen from clone
 CC S25, C25, C39, JG6, 3D12, B4, 1F3, huC25, Ar1, Ar2, WR1(V), WR1(T), 3-1,
 CC 3-8, 3-10 and 1N61, where (I) binds to and neutralizes botulinum
 CC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II)
 CC comprising BoNT/A neutralising epitope having an epitope that is
 CC specifically bound by an antibody expressed by clones as mentioned in (I)
 CC ; producing (I); and a composition (III) comprising several anti-
 CC botulinum neurotoxin antibodies, where each antibody is specific for a
 CC different epitope of a botulinum neurotoxin and the combination of
 CC antibodies shows greater toxin neutralisation than the single antibodies
 CC in surplus. The following are disclosed: a pharmaceutical composition
 CC comprising (I); and a kit comprising (I). (I) is useful for neutralising
 CC BoNT/A antibody and for neutralising a botulinum neurotoxin which
 CC involves contacting neurotoxin with (I) in surplus, where each of (I) is
 CC specific for a different epitope of the botulinum neurotoxin and the
 CC combination of antibodies shows greater toxin neutralisation than the
 CC single antibodies in surplus. (I) is useful for diagnosing the botulism
 CC or for treating pathologies associated with botulinum neurotoxin
 CC poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I)
 CC enables rapid detection or diagnosis of botulism. This is the amino acid
 CC sequence of a mouse heavy chain variable fragment anti-botulinum toxin
 CC scFv.

 XX PT New antibodies that specifically bind to cancer antigen MUC-1, useful for
 XX PT tumor targeting, for inhibiting the growth or proliferation of cancer
 XX PT cells or as diagnostic agents to identify tumors and monitor levels of
 XX PT circulating antigen.
 XX PS Claim 7; SEQ ID NO 21; 79pp; English.
 XX CC The invention provides novel antibodies that specifically bind to the MUC
 XX CC -1 cancer antigen. Preferred single chain antibodies were obtained from a
 XX CC phage display library and were designated as 12E, 3D, A5, C4, B5, B1 and
 XX CC B9 ADZ21537-ADZ21543. The heavy chain variable regions (VH) and light
 XX CC chain variable regions (VL) of these antibodies are also provided
 XX CC ADZ21533-ADZ21536. The VH and VL domains govern the specificity and
 XX CC binding affinity of the antibodies and permit the construction of a
 XX CC variety of antibodies that specifically target the MUC-1 antigen and
 XX CC cells bearing/displaying the antigen. The antibodies are useful targeting
 XX CC moieties for specifically directing imaging agents and various
 XX CC therapeutic moieties to a cancer. A claimed method of inhibiting the
 XX CC growth or proliferation of a cell bearing a MUC-1 antigen comprises
 XX CC contacting the cell with a chimeric molecule comprising an anti-MUC-1
 XX CC antibody attached to a cytotoxin, a radionuclide, a liposome comprising
 XX CC an anti-cancer drug, a prodrug or an anti-cancer drug. The present
 XX CC sequence is that of single chain antibody B9.

XX New antibody that competitively inhibits binding of a pleiotrophin (PTV)
XX polypeptide to an antibody, useful for neutralizing at least one
XX biological activity of PTN in a subject thus treating or preventing
XX cancers e.g., leukemia.

XX Claim 16; SEQ ID NO 3; 38pp; English.

XX The present invention relates to an antibody that competitively inhibits
XX binding of a pleiotrophin (PTN) protein. The invention is useful for
XX neutralising at least one biological activity of PTN in a subject thus
XX preventing or treating cancers such as carcinomas, sarcomas, or
XX haematopoietic neoplastic disorders, Hodgkin's disease, Non-hodgkin's
XX lymphoma, multiple myeloma, leukaemia, neuroblastoma, breast cancer,
XX ovarian cancer, lung cancer, cancers of head and neck, cancer of
XX endothelium, cancers of bone, cancer of muscle, pancreatic cancer,
XX rhabdomyosarcoma, primary thrombocytosis, primary macroglobulinaemia,
XX small-cell lung tumours, stomach cancer, colon cancer, kidney cancer,
XX malignant pancreatic insulinoma, malignant carcinoid, urinary bladder
XX cancer, melanoma, premalignant skin lesions, testicular cancer,
XX lymphomas, thyroid cancer, oesophageal cancer, genitourinary tract
XX cancer, malignant hypercalcaemia, cervical cancer, endometrial cancer,
XX epidermal cancer, adrenal cortical cancer, prostate cancer, or uterine
XX cancer. The present sequence is the human 3B10 heavy chain variable
XX region (VH) protein.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-08-974-899-10
; Sequence 10, Application US/08974899
; Patent No. 6037454
; GENERAL INFORMATION:
; APPLICANT: Prestea, Leonard G.
; APPLICANT: Jardiou, Paula M.
; TITLE OF INVENTION: Humanized Anti-CD11a Antibodies
; NUMBER OF SEQUENCES: 24
; CORRESPONDENCE ADDRESS:
; ADDRESSEE: Genentech, Inc.
; STREET: 1 DNA Way
; CITY: South San Francisco
; STATE: California
; COUNTRY: USA
; ZIP: 94080
; COMPUTER READABLE FORM:
; MEDIUM TYPE: 3.5 inch, 1.44 Mb floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: Winpatin (Genentech)
; CURRENT APPLICATION DATA:
; APPLICATION NUMBER: US/08/974,899
; FILING DATE:
; CLASSIFICATION: 536
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: 60/031971
; FILING DATE: 11/27/96
; ATTORNEY/AGENT INFORMATION:
; NAME: Lee, Wendy M.
; REGISTRATION NUMBER: 40,378
; REFERENCE/DOCKET NUMBER: P1014R1
; TELECOMMUNICATION INFORMATION:
; TELEPHONE: 650/225-1994
; TELEFAX: 650/952-9881
; INFORMATION FOR SEQ ID NO: 10:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 10 amino acids
; TYPE: Amino Acid
; TOPOLOGY: Linear
; US-08-974-899-10
Query Match 100.0%; Score 64; DB 2; Length 10;
Best Local Similarity 100.0%; Pred. No. 0.00063;

PCT-US95-11235-65
Sequence 65, Application PC/TUS9511235
GENERAL INFORMATION:
APPLICANT: THE SCRIPPS RESEARCH INSTITUTE
TITLE OF INVENTION: METHODS FOR PRODUCING ANTIBODY LIBRARIES
TITLE OF INVENTION: USING UNIVERSAL OR RANDOMIZED IMMUNOGLOBULIN LIGHT CHAINS
NUMBER OF SEQUENCES: 70
CORRESPONDENCE ADDRESS:
ADDRESSEE: The Scripps Research Institute
STREET: 10666 North Torrey Pines Road, TPC8
CITY: La Jolla
STATE: CA
COUNTRY: USA
ZIP: 92037
COMPUTER READABLE FORM:
MEDIUM TYPE: floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patent Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: PCT/US95/11235
FILING DATE: 01-SEP-1995
CLASSIFICATION:
PRIOR APPLICATION DATA:
APPLICATION NUMBER: US 08/300,386

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC anti-CD11a antibody MEM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing LFA-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanized version of MEM24 had IC50 0.13 nM. The present
 CC sequence represents the heavy chain variable region CDR2 of the humanised
 CC anti-CD11a Ab

 PT Humanized anti-CD11a antibody useful for treating lymphocyte function-
 PT associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
 PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.
 XX
 PS Claim 6; SEQ ID NO 11; 43pp; English.

CC The invention relates to a Humanised anti-cluster of differentiation
 CC (CD11a) antibody having specificity to human CD11a I-domain or CD11a with
 CC a kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (nm) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the nucleic acid, a host cell comprising
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MEM24 on CD11a. The

CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is a CDR (complementarity determining region) of the
 CC heavy chain variable region (VH) of the humanised mouse anti-CD11a I
 CC domain monoclonal antibody MEM24.

 PT New antibody mutant of a species-dependent antibody, useful for treating
 PT and preventing infectious diseases, psoriasis, inflammatory bowel
 PT disease, allergic conditions, autoimmune diseases, or cancer.
 XX
 PS Example; SEQ ID NO 26; 54pp; English.

CC The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful

CC for treating and preventing infectious diseases such as human
 CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 CC disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 CC disease and ulcerative colitis, adult respiratory distress syndrome,
 CC allergic diseases such as eczema and asthma, autoimmune diseases such as
 CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 CC mellitus, Reynaud's syndrome, immunological diseases such as
 CC tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary
 CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is humanised murine anti-human CD11a monoclonal antibody
 CC (MHM24) CDR-H2 peptide. This sequence is used in the exemplification of
 CC the invention.

 PT New humanised anti-CD11a antibody - used in immunoassays for CD11a, and
 PT also to treat conditions such as immunological or inflammatory disease.
 XX
 PS Claim 7; Page 50; 66pp; English.

CC The present sequence represents the heavy chain variable region of a
 CC humanised anti-CD11a antibody that binds specifically to the human CD11a
 CC I domain (MHM24 epitope). CD11a refers to the alpha subunit of lymphocyte
 CC function-associated antigen 1 (LFA-1) from any mammal. The humanised anti-
 CC CD11a antibodies are used to determine presence of CD11a in usual
 CC immunoassays or by in vivo imaging, particularly for diagnosis of CD11a-
 CC associated diseases (typically immune responses and inflammation such as
 CC psoriasis, Crohn's disease, rheumatoid arthritis, transplant rejection,

CC leukaemia, etc

 PT Mutants of species-dependent antibodies with affinity for non-human
 PT mammalian antigen - greater than for parent antibody, particularly used
 PT for pre-clinical trial(s) in theus monkey(s) of therapeutic antibodies
 PT directed against CD11a.
 XX
 PS Disclosure; Page 55; 71pp; English.

CC This sequence represents the heavy chain of the humanised antibody MHM24,
 CC and was used to produce a mutant of the invention. The mutants are of a
 CC species-dependent antibody (Ab), and have an amino acid substitution in a
 CC variable region of the Ab, and binding affinity for an antigen (Ag) from
 CC a non-human mammal at least 10 times stronger than for the wild type Ab
 CC against the Ag. The mutant antibodies are particularly intended for
 CC administration to a non-human mammal in preclinical studies (e.g. of
 CC infection, immunity, haematopoiesis or transplantation). They can also be
 CC used diagnostically (to identify specific proteins) or therapeutically,
 CC e.g. where directed against CD11a (lymphocyte function-associated antigen
 CC -1) or intercellular adhesion molecule-1 against a wide variety of
 CC inflammatory or autoimmune diseases, malignancies, transplant rejection,
 CC human immune deficiency virus infection and tumour cell invasion.
 CC Conversion to the mutant form allows useful antibodies to be produced
 CC from antibodies which normally have affinity for non-human analogues of
 CC the Ag too low to be of any use

PT New humanised anti-CD11a antibody, useful for treating or preventing e.g.
 PT inflammation and transplant rejection, contains human heavy variable
 PT region complementarity determining regions.

PS Claim 1; Fig 1; 38pp; English.

XX The present invention describes a humanised anti-CD11a antibody (Ab) that
 CC binds specifically to the human CD11a I-domain. The Ab has anti-
 CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
 CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
 CC involved in leucocyte adhesion associated with inflammatory and
 CC immunological responses. The Ab are used: (i) optionally when coupled to
 CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
 CC rhinitis, leukaemia, viral infections and many others, also for
 CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
 CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
 CC to active anticancer agent; and (v) for affinity chromatography. The Ab
 CC retain about the same activity in adhesion and mixed lymphocyte response
 CC assays as the murine antibodies from which they are derived. The murine
 CC anti-CD11a antibody MM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing LFA-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanized version of MM24 had IC50 0.13 nM. The present
 CC sequence represents the heavy chain variable region of the humanised anti
 CC -CD11a Ab

PT Humanised anti-CD11a antibody useful for treating lymphocyte function-
 PT associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
 PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.

PS Claim 7; SEQ ID NO 5; 43pp; English.

XX The invention relates to a Humanised anti-cluster of differentiation
 CC (CD11a) antibody having specificity to human CD11a I-domain or CD11a with
 CC a kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (nM) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the nucleic acid, a host cell comprising
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MM24 on CD11a. The
 CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis; Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is the heavy chain variable region (VH) of the humanised
 CC mouse anti-CD11a I domain monoclonal antibody MM24.

 PT Purifying a protein, e.g. antibody or immunoadhesin, comprises reducing
 PT the temperature of a composition subjected to protein A affinity
 PT chromatography to 3-20 degrees C, where protein A leaching is reduced.
 XX
 PS Disclosure; SEQ ID NO 6; 27pp; English.
 XX
 CC The invention relates to a method of purifying a protein which comprises
 CC a CH2/CH3 region by protein A affinity chromatography. The method
 CC involves reducing the temperature of a composition comprising the protein
 CC and one or more impurities subjected to protein A affinity chromatography
 CC to 3-20 degrees Celsius, where protein A leaching is reduced. Preferably
 CC the protein is antibody. The antibody is selected from Trastuzumab,
 CC humanized 2C4, humanized CD11a antibody, and humanized VEGF antibody.
 CC Preferably, the antibody binds HER2 antigen, where the antibody is
 CC Trastuzumab or humanized 2C4. The protein is an immunoadhesin.
 CC Specifically a TNF receptor immunoadhesin. The methods are useful for
 CC purifying a protein, which comprises a CH2/CH3 region by protein A
 CC affinity chromatography and for reducing leaching of protein A during
 CC protein A affinity chromatography. The current sequence represents the
 CC variable heavy chain amino acid sequence of CD11a.

 PT Purifying target protein from mixture containing host cell protein
 PT involves subjecting mixture to non-affinity purification, high-
 PT performance tangential flow filtration and isolating purified protein.
 XX
 PS Disclosure; SEQ ID NO 4; 77pp; English.
 XX
 CC The invention relates to a method for purifying a target protein from a
 CC mixture containing a host cell protein. This method comprises subjecting
 CC the mixture to a non-affinity purification followed by high-performance
 CC tangential flow filtration (HPLFF) and isolating the protein in a purity
 CC containing less than 100 parts/million (ppm) of the host cell protein,
 CC where the method of the invention includes no affinity purification
 CC process. The method of the invention is useful for purifying a target
 CC protein from a mixture containing a host cell protein, and is useful for
 CC incorporating the isolated protein into a pharmaceutical formulation.
 CC Proteins purified using the method of the invention are useful in a
 CC pharmaceutical respect, and are also useful in various diagnostic and
 CC therapeutic purposes. The method of the invention is efficient in
 CC purifying a target protein from a mixture containing a host cell protein,
 CC and may also be effectively performed at low cost. The current sequence
 CC represents the anti-CD11a rhumAb heavy chain amino acid sequence. This
 CC particular protein was used to demonstrate the method of the invention.

PS
XX
XX The present invention relates to an antibody mutant of a species-
CC dependent antibody with beneficial properties. The invention is useful
CC for treating and preventing infectious diseases such as human
CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
CC diseases such as psoriasis, inflammatory bowel diseases such as Crohn's
CC disease and ulcerative colitis, adult respiratory distress syndrome,
CC allergic diseases such as eczema and asthma, autoimmune diseases such as
CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
CC mellitus, Reynaud's syndrome, immunological diseases such as
CC tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary
CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
CC disorders such as poison ivy and poison oak, B-cell malignancies such as
CC chronic lymphocytic leukemia and hairy cell leukemia, graft versus host
CC disease and cancer. The invention is also useful in gene therapy. The
CC present sequence is humanised murine anti-human CD11a monoclonal antibody
CC (MHM24) CDR-H2 mutant peptide. This sequence is used in the
CC exemplification of the invention.

XX
CC The invention relates to an antibody or its antigen-binding fragment,
CC which binds to CS1 (also known as SLAMF7) and
CC inhibits immunoglobulin secretion, where the antibody binds to
CC substantially the same epitope as an antibody comprising an amino acid
CC sequence of any one of SEQ ID NOS: 3-26, the antibody comprises an amino
CC acid sequence of SEQ ID NOS: 27-44, and where the heavy chain variable
CC region comprises a complementarity determining region (CDR) of SEQ ID NO:
CC 33. Also disclosed are (i) a heavy chain CDR of an antibody comprising an
CC amino acid sequence of SEQ ID NOS: 9-11, 15-17, 21-23, 29-33, (ii) a
CC light chain CDR of an antibody comprising an amino acid sequence of SEQ
CC ID NOS: 12-14, 18-20, 24-26, 34-370, (iii) a pharmaceutical composition
CC comprising a pharmaceutical carrier and the antibody described above,
CC (iv) a method of inhibiting proliferation of CS1 expressing cells, (v)
CC inhibiting immunoglobulin secretion, and (vi) increasing antibody-
CC dependent cellular cytotoxicity (ADCC) activity of the antibody described
CC above, where the antibody has decreased levels of fucose or is mutated to
CC increase antibody affinity for a Fc gamma R receptor. The antibody of the
CC invention inhibits the proliferation of leukocytes or cancer cells. The
CC antibody triggers cytotoxic effects on cells expressing CS1 or enhances
CC cytotoxicity mediated by immune cells, or triggers ADCC-mediated
CC cytotoxicity of cells expressing CS1. The antibody binds to substantially
CC the same epitope as the antibody produced by a hybridoma cell line having
CC ATCC accession number PTA-5091 or a Luc90 antibody. The antibody is
CC produced by a hybridoma cell line having ATCC accession number PTA-5091
CC or by a hybridoma cell line expressing Luc90 antibody. The antibody is a
CC monoclonal antibody, e.g. a chimeric antibody, a humanized antibody, or a
CC fully human antibody. The antibody is conjugated with a cytotoxic agent.
CC The antibody comprises a heavy chain variable region comprising amino
CC acid sequences of SEQ ID NOS: 3, 5, 7, or 27, and a light chain variable
CC region comprising amino acid sequences of SEQ ID NOS: 4, 6, 8, or 28. The
CC antibody, compositions, and methods are useful for diagnosing, preventing
CC or treating plasma cell cancer, e.g. myeloma, multiple myeloma, myeloma
CC of bone, extramedullary plasmacytoma, macroglobulinemia (including
CC Waldenström's macroglobulinemia), heavy-chain disease, primary
CC amyloidosis or monoclonal gammopathy of unknown significance, non-plasma
CC cell cancer (chronic lymphocytic leukemia), autoimmune disorder,
CC inflammatory bowel disease (IBD), or systemic lupus erythematosus (SLE).
CC This sequence represents a CDR from a CS1 antibody.

XX New antibody that binds specifically to a stalk of CD30 of a cell, or to
PT an epitope destroyed upon cleavage of soluble CD30 (sCD30) from intact
PT CD30, useful for inhibiting the growth of a CD30+ cancer cell.
XX
PS Claim 66; SEQ ID NO 12; 102pp; English.
XX
CC The present invention describes an isolated antibody that binds
CC specifically to a stalk of CD30 of a cell, or to an epitope destroyed
CC upon cleavage of soluble CD30 (sCD30) from intact CD30. Also described:
CC (1) a composition comprising the antibody conjugated or fused to a
CC therapeutic part; (2) a nucleic acid encoding an antibody that binds
CC specifically to a stalk of CD30 of a cell, or to an epitope destroyed
CC upon cleavage of sCD30 from intact CD30; (3) an expression vector
CC comprising the nucleic acid operably linked to a promoter; (4) inhibiting
CC growth of a CD30+ cancer cell; (5) detecting the presence of a CD30+ cell
CC in a biological sample; (6) a host cell expressing the isolated nucleic
CC acid encoding the antibody having variable heavy and variable light
CC chains; and (7) a kit for detecting the presence of a CD30+ cancer cell
CC in a biological sample comprising a container and an anti-CD30 antibody.
CC An anti-CD30 antibody has cytostatic activity, and can be used in gene
CC therapy. The anti-CD30 antibody that binds specifically to a stalk of
CC CD30 of a cell, or to an epitope destroyed upon cleavage of sCD30 from
CC intact CD30 is useful for the manufacture of a medicament for inhibiting
CC the growth of a CD30+ cancer cell. The present sequence is used in the
CC exemplification of the present invention.

 XX Disclosure; Page 54; 71pp; English.
 XX This sequence represents the heavy chain of the murine antibody MHM24,
 CC and was used to produce a mutant of the invention. The mutants are of a
 CC species-dependent antibody (Ab), and have an amino acid substitution in a
 CC variable region of the Ab, and binding affinity for an antigen (Ag) from
 CC a non-human mammal at least 10 times stronger than for the wild type Ab
 CC against the Ag. The mutant antibodies are particularly intended for
 CC administration to a non-human mammal in preclinical studies (e.g. of
 CC infection, immunity, haematopoiesis or transplantation). They can also be
 CC used diagnostically (to identify specific proteins) or therapeutically,
 CC e.g. where directed against CD11a (lymphocyte function-associated antigen
 CC -1) or intercellular adhesion molecule-1 against a wide variety of
 CC inflammatory or autoimmune diseases, malignancies, transplant rejection,
 CC human immune deficiency virus infection and tumour cell invasion.
 CC Conversion to the mutant form allows useful antibodies to be produced
 CC from antibodies which normally have affinity for non-human analogues of
 CC the Ag too low to be of any use

 XX New humanized anti-CD11a antibody, useful for treating or preventing e.g.
 PT inflammation and transplant rejection, contains human heavy variable
 PT region complementarily determining regions.
 XX Example; Fig 1; 38pp; English.
 XX PS
 XX The present invention describes a humanised anti-CD11a antibody (Ab) that
 CC binds specifically to the human CD11a I-domain. The Ab has anti-
 CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
 CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
 CC involved in leucocyte adhesion associated with inflammatory and
 CC immunological responses. The Ab are used: (i) optionally when coupled to
 CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
 CC rhinitis, leukaemia, viral infections and many others, also for
 CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
 CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
 CC to active anticancer agent; and (v) for affinity chromatography. The Ab
 CC retain about the same activity in adhesion and mixed lymphocyte response
 CC assays as the murine antibodies from which they are derived. The murine
 CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
 CC between Jurkat cells (expressing LFA-1) and normal epidermal
 CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
 CC The fully humanised version of MHM24 had IC50 0.13 nM. The present
 CC sequence represents the amino acid sequence of murine MHM24 heavy chain,
 CC which is used in the exemplification of the present invention

 DR Humanized anti-CD11a antibody useful for treating lymphocyte function-
 XX associated antigen mediated disorder e.g. psoriasis, Crohn's disease,
 PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.
 PS Example; SEQ ID NO 4; 43pp; English.
 XX The invention relates to a Humanised anti-cluster of differentiation
 CC (CD)11a antibody having specificity to human CD11a I-domain or CD11a with
 CC a Kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (mM) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the nucleic acid, a host cell comprising
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The
 CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is the heavy chain variable region (VH) of the wild-type
 CC mouse anti-CD11a I domain monoclonal antibody MHM24.

 XX New antibody mutant of a species-dependent antibody, useful for treating
 PT and preventing infectious diseases, psoriasis, inflammatory bowel
 PT disease, allergic conditions, autoimmune diseases, or cancer.
 PS Example; SEQ ID NO 4; 54pp; English.
 XX The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful
 CC for treating and preventing infectious diseases such as human
 CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 CC disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 CC disease and ulcerative colitis, adult respiratory distress syndrome,
 CC allergic diseases such as eczema and asthma, autoimmune diseases such as
 CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 CC mellitus, Reynaud's syndrome, immunological diseases such as
 CC tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary
 CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukaemia and hairy cell leukaemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is murine anti-human CD11a monoclonal antibody (MHM24)
 CC variable heavy chain protein. This sequence is used in the
 CC exemplification of the invention.

XX
XX Novel antibody that specifically binds and neutralizes botulinum
PT neurotoxin type A useful for neutralizing botulinum neurotoxin and
PT treating botulism.
XX
PS Claim 6; Page 22; 31pp; English.
XX
XX The invention relates to an isolated antibody that specifically binds to
CC an epitope specifically bound by an antibody expressed by a clone such as
CC clone S25, C35, C39, 1C6 and clone 1F3, where the antibody binds to and
CC neutralises botulinum neurotoxin type A (BONT/A). Also included are a
CC polypeptide comprising BONT/A neutralising epitope comprising an epitope
CC which is specifically bound by the antibody, where the polypeptide is not
CC a full-length botulinum neurotoxin H c fragment and making an anti-BONT/A
CC antibody that neutralises BONT/A (by contacting several antibodies with
CC an epitope specifically bound by an antibody expressed by any of the
CC novel clones and isolating an antibody that specifically binds to the
CC epitope). The antibody is useful for neutralising a BONT/A, by contacting
CC botulinum neurotoxin type A with the antibody comprising VH CDR (heavy
CC chain variable region complementarily determining region) and with a
CC second anti-BONT/A antibody which comprises a VH CDR, where the second
CC antibody binds to a different epitope than the first anti-BONT/A
CC antibody. The antibody is useful in the treatment of pathologies
CC associated with botulinum neurotoxin poisoning, for rapid
CC detection/diagnosis of botulism and in the detection and/or
CC quantification of BONT/A in a biological sample obtained from an organism.
CC Which is indicative of a Clostridium botulinum infection of the organism.
CC The present sequence is a heavy chain variable region (VH) of a single
CC chain antibody (scfv) of the invention

 PT New antibodies that specifically bind to cancer antigen MUC-1, useful for
 PT tumor targeting, for inhibiting the growth or proliferation of cancer
 PT cells or as diagnostic agents to identify tumors and monitor levels of
 PT circulating antigen.
 XX
 PS Claim 6; SEQ ID NO 13; 79pp; English.
 XX
 CC The invention provides novel antibodies that specifically bind to the MUC
 CC -1 cancer antigen. Preferred single chain antibodies were obtained from a
 CC phage display library and were designated as 12E, 3D, A5, C4, B5, E1 and
 CC B9 AD221537-AD221543. The heavy chain variable regions (VH) and light
 CC chain variable regions (VL) of these antibodies are also provided
 CC AD221523-AD221536. The VH and VL domains govern the construction of a
 CC binding affinity of the antibodies and permit the construction of a
 CC variety of antibodies that specifically target the MUC-1 antigen and
 CC cells bearing/displaying the antigen. The antibodies are useful targeting
 CC moieties for specifically directing imaging agents and various
 CC therapeutic moieties to a cancer. A claimed method of inhibiting the
 CC growth or proliferation of a cell bearing a MUC-1 antigen comprises
 CC contacting the cell with a chimeric molecule comprising an anti-MUC-1
 CC antibody attached to a cytotoxicin, a radionuclide, a liposome comprising
 CC an anti-cancer drug, a prodrug or an anti-cancer drug. The present
 CC sequence is that of the VH region of single chain antibody B9 AD221543.

 PT New isolated antibody that neutralizes botulinum neurotoxin type A,
 PT useful for diagnosing botulism or for treating pathologies associated

PT with botulinum neurotoxin poisoning.
 XX
 PS Example 1; SEQ ID NO 52; 110pp; English.
 XX
 CC The invention describes an isolated antibody (I) that specifically binds
 CC to an epitope specifically bound by an antibody expressed by a specific
 CC clone where (I) binds to and neutralises botulinum neurotoxin type A
 CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope
 CC specifically bound by an antibody expressed by a clone chosen from clone
 CC S25, C25, C39, 1C6, 3D12, B4, 1F3, huc25, Ar1, Ar2, WR1(V), WR1(T), 3-1,
 CC 3-8, 3-10 and ING1, where (I) binds to and neutralizes botulinum
 CC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II)
 CC comprising BoNT/A neutralising epitope having an epitope that is
 CC specifically bound by an antibody expressed by clones as mentioned in (I)
 CC ; producing (I); and a composition (III) comprising several anti-
 CC botulinum neurotoxin antibodies, where each antibody is specific for a
 CC different epitope of a botulinum neurotoxin and the combination of
 CC antibodies shows greater toxin neutralisation than the single antibodies
 CC in surplus. The following are disclosed: a pharmaceutical composition
 CC comprising (I); and a kit comprising (I). (I) is useful for neutralising
 CC BoNT/A antibody and for neutralising a botulinum neurotoxin which
 CC involves contacting neurotoxin with (I) in surplus, where each of (I) is
 CC specific for a different epitope of the botulinum neurotoxin and the
 CC combination of antibodies shows greater toxin neutralisation than the
 CC single antibodies in surplus. (I) is useful for diagnosing the botulism
 CC or for treating pathologies associated with botulinum neurotoxin
 CC poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I)
 CC enables rapid detection or diagnosis of botulism. This is the amino acid
 CC sequence of a mouse heavy chain variable fragment anti-botulinum toxin
 CC scFv.

 DR
 XX Novel antibody that specifically binds and neutralizes botulinum
 PT neurotoxin type A useful for neutralizing botulinum neurotoxin and
 PT treating botulism.
 XX
 PS Claim 6; Page 22; 31pp; English.
 XX
 XX The invention relates to an isolated antibody that specifically binds to
 CC an epitope specifically bound by an antibody expressed by a clone such as
 CC clone 825, C25, C39, 1C6 and clone 1F3, where the antibody binds to and
 CC neutralises botulinum neurotoxin type A (BoNT/A). Also included are a
 CC polypeptide comprising BoNT/A neutralising epitope comprising an epitope
 CC which is specifically bound by the antibody, where the polypeptide is not
 CC a full-length botulinum neurotoxin H C fragment and making an anti-BoNT/A
 CC antibody that neutralises BoNT/A (by contacting several antibodies with
 CC an epitope specifically bound by an antibody expressed by any of the
 CC novel clones and isolating an antibody that specifically binds to the
 CC epitope). The antibody is useful for neutralising a BoNT/A, by contacting
 CC botulinum neurotoxin type A with the antibody comprising VH CDR (heavy
 CC chain variable region complementarity determining region) and with a
 CC second anti-BoNT/A antibody which comprises a VH CDR, where the second
 CC antibody binds to a different epitope than the first anti-BoNT/A
 CC antibody. The antibody is useful in the treatment of pathologies
 CC associated with botulinum neurotoxin poisoning, for rapid
 CC detection/diagnosis of botulism and in the detection and/or
 CC quantification of BoNT/A in a biological sample obtained from an organism
 CC which is indicative of a Clostridium botulinum infection of the organism.
 CC The present sequence is a heavy chain variable region (VH) of a single
 CC chain antibody (scFv) of the invention

XX New isolated antibody that neutralizes botulinum neurotoxin type A,
PT useful for diagnosing botulism or for treating pathologies associated
PT with botulinum neurotoxin poisoning.

PS Example 1; SEQ ID NO 50; 110pp; English.

The invention describes an isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a specific clone where (I) binds to and neutralises botulinum neurotoxin type A (BoNT/A). An isolated antibody (I) that specifically binds to an epitope specifically bound by an antibody expressed by a clone chosen from clones S25, C25, C39, 1C6, 3D12, B4, 1f3, huc5, Ar1, Ar2, WR1 (V), WR1 (T), 3-1-, 3-8-, 3-10 and ING1, where (I) binds to and neutralizes botulinum neurotoxin type A (BoNT/A). Also described are: a polypeptide (II) comprising BoNT/A neutralising epitope having an epitope that is specifically bound by an antibody expressed by clones as mentioned in (I), producing (I), and a composition (III) comprising several anti-botulinum neurotoxin antibodies, where each antibody is specific for a different epitope of a botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. The following are disclosed: a pharmaceutical composition comprising (I); and a kit comprising (I). (I) is useful for neutralising BoNT/A antibody and for neutralising a botulinum neurotoxin which involves contacting neurotoxin with (I) in surplus, where each of (I) is specific for a different epitope of the botulinum neurotoxin and the combination of antibodies shows greater toxin neutralisation than the single antibodies in surplus. (I) is useful for diagnosing the botulism or for treating pathologies associated with botulinum neurotoxin poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I) enables rapid detection or diagnosis of botulism. This is the amino acid sequence of a mouse heavy chain variable fragment anti-botulinum toxin gCFV.

XX Novel bispecific antibody substituting for function of cofactor that
PT enhances enzyme reaction, and recognizing both enzyme and substrates of
PT enzyme, useful for treating hemophilia A.
XX

PS Disclosure; SEQ ID NO 59; 699p; Japanese.
XX

CC This invention describes a novel bispecific antibody which can act as a
CC cofactor to enhance an enzyme reaction and can recognize the enzyme and
CC the enzyme substrate. The antibody specifically binds to blood
CC coagulation factor VIII. The invention also describes a composition
CC comprising the antibody and a carrier, a kit useful in preventing and/or
CC treating bleeding associated with a disorder or from a disease caused by
CC bleeding. The composition includes blood coagulation factor VIII. The
CC antibody of the invention can be a blood-coagulation fibrinolysis related
CC factor including blood-coagulation factor VIII, blood coagulation factor
CC X, or blood-coagulation factor IX. The antibody comprises a complementary
CC determining region (CDR) of anti-blood-coagulation factor IX/IXa factor
CC antibody. The novel antibody or composition is useful for preventing
CC and/or treating a disease accompanying bleeding, or the disease resulting
CC from bleeding, where the disease accompanies bleeding or the disease
CC resulting from bleeding develops and/or progresses by an active reduction
CC or deletion of the blood coagulation factor VIII. The disease the
CC develops and/or progresses by an active reduction or deletion of the
CC blood coagulation factor VIII and/or activation blood coagulation factor
CC VIII, is hemophilia A or von Willebrand disease, where the hemophilia is
CC an acquired hemophilia A. This sequence represents a fragment of the
CC antibody described in the method of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

S42183 Ig gamma chain V region - mouse (fragment)

C:Species: Mus musculus (house mouse)

C>Date: 28-Sep-1994 #sequence_revision 21-Jul-1995 #text_change 23-Jul-1999

C:Accession: S42183

R:Mo. J.A.; Bona, C.A.; Holmdahl, R.

Eur. J. Immunol. 23, 2503-2510, 1993

A>Title: Variable region gene selection of immunoglobulin G-expressing B cells with spec

A:Reference number: S42176; MUID:94009207; PMID:7691608

A:Accession: S42183

A>Status: preliminary

A:Molecule type: DNA

A:Residues: 1-101 <NOJ>

A:Cross-references: UNIPARC:UPI0000116565; EMBL:Z25455; NID:9407824; PIND:CAA80942.1; PI

C:Superfamily: immunoglobulin V region; immunoglobulin homology

C:Keywords: immunoglobulin

F:15-98/Domain: immunoglobulin homology <IMM>

Query Match 91.4%; Score 85; DB 2; Length 101;

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

New humanised anti-CD11a antibody - used in immunoassays for CD11a, and
 also to treat conditions such as immunological or inflammatory disease.

Claim 6; Page 2; 66pp; English.

AAW62010-12 represent complementarity determining regions of the heavy
 chain variable region of humanised antibody MM24F(ab)-8. The fragments
 were used to make a humanised anti-CD11a antibody that binds specifically

CC to the human CD11a I domain (MM24 epitope). CD11a refers to the alpha
 CC subunit of lymphocyte function-associated antigen 1 (LFA-1) from any
 CC mammal. The humanised anti-CD11a antibodies are used to determine
 CC presence of CD11a in usual immunoassays or by in vivo imaging,
 CC particularly for diagnosis of CD11a-associated diseases (typically immune
 CC responses and inflammation such as psoriasis, Crohn's disease, rheumatoid
 CC arthritis, transplant rejection, leukaemia, etc

New humanized anti-CD11a antibody, useful for treating or preventing e.g.
 inflammation and transplant rejection, contains human heavy variable
 region complementarity determining regions.

Claim 1; Col 57-58; 38pp; English.

The present invention describes a humanised anti-CD11a antibody (Ab) that
 binds specifically to the human CD11a I-domain. The Ab has anti-
 inflammatory, immunosuppressant, antitumour and antiviral activities. The
 Ab blocks lymphocyte function-associated antigen (LFA-1) which is
 involved in leucocyte adhesion associated with inflammatory and
 immunological responses. The Ab are used: (i) optionally when coupled to
 a cytotoxin, to treat or prevent disorders mediated by lymphocyte
 function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
 inflammatory bowel disease, eczema, systemic lupus erythematosus,
 rhinitis, leukaemia, viral infections and many others, also for
 inhibiting graft rejection; (ii) when labeled, to detect CD11a;
 tumor pretreatment; (iv) for delivery of enzymes that convert prodrugs
 to active anticancer agent; and (v) for affinity chromatography. The Ab
 retain about the same activity in adhesion and mixed lymphocyte response
 assays as the murine antibodies from which they are derived. The murine

CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
CC between Jurkat cells (expressing LFA-1) and normal epidermal
CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
CC The fully humanized version of MHM24 had IC50 0.13 nM. The present
CC sequence represents the heavy chain variable region CDR3 of the humanised
CC anti-CD11a Ab

PT Humanized anti-CD11a antibody useful for treating lymphocyte function-
PT associated antigen mediated disorder e.g. psoriasis; Crohn's disease,
PT ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.
XX
PS Claim 6; SEQ ID NO 12; 43bp; English.
XX
XX The invention relates to a Humanised anti-cluster of differentiation
CC (CD11a) antibody having specificity to human CD11a I-domain or CD11a with
CC a kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
CC inhibition (IC50) (nM) value of not more than 1 nM in mixed lymphocyte
CC response assay or for preventing adhesion of Jurkat cells to normal human
CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
CC -1. Also included are a kit comprising the antibody and instructions for
CC use to detect the CD11a protein, an isolated nucleic acid encoding the
CC antibody, a vector comprising the nucleic acid, a host cell comprising
CC the vector and producing the antibody by culturing the cell so that the
CC antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The

CC antibody is useful for determining the presence of CD11a protein and for
CC treating lymphocyte function-associated antigen 1 mediated disorder such
CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
CC and diabetes mellitus. The antibody is useful when conjugated to a
CC prodrug activating enzyme, or as an affinity purification agent. The
CC present sequence is a CDR (complementarity determining region) of the
CC heavy chain variable region (VH) of the humanised mouse anti-CD11a I
CC domain monoclonal antibody MHM24.

PT New conjugates of nonproteinaceous polymers with antibody fragments, used
PT for treating inflammatory disorders.
XX
PS Disclosure; Fig 29; 360pp; English.
XX
XX The present invention describes a novel conjugate having one or more
CC antibody fragments covalently attached to one or more nonproteinaceous
CC polymer molecules, where the apparent size of the conjugate is at least
CC about 500 kDa. Conjugates of antibody fragments which bind the human
CC interleukin (IL) 8 with a nonproteinaceous polymer can be used for
CC treating inflammatory disorders e.g. acute lung injury, ischemic
CC reperfusion disorder, and autoimmune diseases. They can also be used for
CC treating e.g. inflammatory skin diseases including psoriasis and atopic
CC dermatitis, systemic scleroderma and sclerosis, and asthmatic diseases.
CC The conjugates can also be used as reagents in an animal model system for
CC in vivo study of the biological functions of the antigen recognised by
CC the conjugate. The present sequence represents the human IgG1 subgroup
CC III heavy chain variable domain form the present invention

PT New nucleic acid molecule encodes a polypeptide which is an anti-interleukin-8 monoclonal antibody or antibody fragment useful for the production of anti-interleukin-8 monoclonal antibodies or fragments.

PS Example; Fig 29; 188bp; English.

XX The invention relates to an anti-interleukin-8 (IL-8) monoclonal antibody (Mab). The anti-IL-8 Mab comprises a sequence containing the CDRs (complementarity determining regions) of the humanized anti-IL-8 6G4.2.SV11N35A light chain; and amino acids 24-253 of the humanized anti-IL-8 6G4.2.SV11N35A heavy chain. The anti-IL-8 Mabs and fragments can be used in diagnosis, for affinity purification of IL-8 from recombinant cell culture or natural sources and for the treatment of inflammatory disorders e.g. adult respiratory distress syndrome. Nucleic acids encoding the anti-IL-8 Mab can be associated in a vector with another gene encoding another protein or protein fragment to produce a fusion protein which can make isolation and/or purification of the protein an easier process

XX Novel conjugates comprising antibody fragments covalently attached to
 PT nonproteinaceous polymer molecules, useful for treating inflammatory
 PT diseases, acute lung injury, ischemic reperfusion injury, pneumonia and
 PT asthma.

XX Example; Fig 29; 266pp; English.

XX The invention relates to novel conjugates comprising antibody fragments
 CC covalently attached to nonproteinaceous polymer molecules. The invention
 CC is useful for treating interleukin (IL)-8 mediated diseases or disorders
 CC such as inflammatory diseases, acute lung injury e.g. adult respiratory
 CC distress syndrome (ARDS), ischemic reperfusion injury e.g. myocardial
 CC infarction, hypovolemic shock, inflammatory bowel disease e.g. ulcerative
 CC colitis, bacterial pneumonia and asthma. The invention is also useful as
 CC a reagent in an animal model system for in vivo study of the biological
 CC functions of the antigen recognised by the conjugate. The present
 CC sequence is human IgG1 subgroup III VH (heavy chain variable domain)
 CC protein. This sequence is used in the exemplification of the invention

 PT New humanized anti-CD11a antibody, useful for treating or preventing e.g.
 PT inflammation and transplant rejection, contains human heavy variable
 PT region complementarily determining regions.
 XX
 PS Example; Fig 1; 38pp; English.

XX The present invention describes a humanised anti-CD11a antibody (Ab) that
CC binds specifically to the human CD11a I-domain. The Ab has anti-
CC inflammatory, immunosuppressant, antitumour and antiviral activities. The
CC Ab blocks lymphocyte function-associated antigen (LFA-1) which is
CC involved in leucocyte adhesion associated with inflammatory and
CC immunological responses. The Ab are used: (i) optionally when coupled to
CC a cytotoxin, to treat or prevent disorders mediated by lymphocyte
CC function-associated antigen-1 (LFA-1; CD11a/CD18), e.g. psoriasis,
CC inflammatory bowel disease, eczema, systemic lupus erythematosus,
CC rhinitis, leukaemia, viral infections and many others, also for
CC inhibiting graft rejection; (ii) when labeled, to detect CD11a; (iii) for
CC tumour pretreatment; (iv) for delivery of enzymes that convert prodrugs
CC to active anticancer agent; and (v) for affinity chromatography. The Ab
CC retain about the same activity in adhesion and mixed lymphocyte response
CC assays as the murine antibodies from which they are derived. The murine
CC anti-CD11a antibody MHM24 has IC50 0.09 nM for preventing adhesion
CC between Jurkat cells (expressing LFA-1) and normal epidermal
CC keratinocytes that express ICAM-1 (intracellular adhesion molecule-1).
CC The fully humanized version of MHM24 had IC50 0.13 nM. The present
CC sequence represents the amino acid sequence of a rhensised antibody
CC mutant heavy chain, which is used in the exemplification of the present
CC invention

Humanized anti-CD11a antibody useful for treating lymphocyte function-associated antigen mediated disorder e.g. psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.

PS Example; SEQ ID NO 24; 43pp; English.

The invention relates to a Humanised anti-cluster of differentiation (CD) 11a antibody having specificity to human CD11a I-domain or CD11a with a Kd value of not more than 1x10⁻⁸ M, or concentration for 50 % inhibition (IC50) (nM) value of not more than 1 nM in mixed lymphocyte response assay or for preventing adhesion of Jurkat cells to normal human epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)-1. Also included are a kit comprising the antibody and instructions for use to detect the CD11a protein, an isolated nucleic acid encoding the antibody, a vector comprising the nucleic acid, a host cell comprising the vector and producing the antibody by culturing the cell so that the antibody is expressed. The antibody binds to epitope MHM24 on CD11a. The antibody is useful for determining the presence of CD11a protein and for treating lymphocyte function-associated antigen 1 mediated disorder such as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma, rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis and diabetes mellitus. The antibody is useful when conjugated to a prodrug activating enzyme, or as an affinity purification agent. The present sequence is the light chain of a rheusused anti-CD11a antibody of the invention.

Humanized anti-CD11a antibody useful for treating lymphocyte function-associated antigen mediated disorder e.g. psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma, rheumatoid arthritis.

PS Example; SEQ ID NO 4; 43pp; English.

XX The invention relates to a Humanised anti-cluster of differentiation
 CC (CD)11a antibody having specificity to human CD11a I-domain or CD11a with
 CC a Kd value of not more than 1x10⁻⁸ M, or concentration for 50 %
 CC inhibition (IC50) (nM) value of not more than 1 nM in mixed lymphocyte
 CC response assay or for preventing adhesion of Jurkat cells to normal human
 CC epidermal keratinocytes expressing intercellular adhesion molecule (ICAM)
 CC -1. Also included are a kit comprising the antibody and instructions for
 CC use to detect the CD11a protein, an isolated nucleic acid encoding the
 CC antibody, a vector comprising the nucleic acid, a host cell comprising
 CC the vector and producing the antibody by culturing the cell so that the
 CC antibody is expressed. The antibody binds to epitope MEM24 on CD11a. The
 CC antibody is useful for determining the presence of CD11a protein and for
 CC treating lymphocyte function-associated antigen 1 mediated disorder such
 CC as psoriasis, Crohn's disease, ulcerative colitis, dermatitis, asthma,
 CC rheumatoid arthritis, systemic lupus erythematosus, multiple sclerosis
 CC and diabetes mellitus. The antibody is useful when conjugated to a
 CC prodrug activating enzyme, or as an affinity purification agent. The
 CC present sequence is the heavy chain variable region (VH) of the wild-type
 CC mouse anti-CD11a I domain monoclonal antibody MEM24.

XX Purifying target protein from mixture containing host cell protein
 PT involves subjecting mixture to non-affinity purification, high-
 PT performance tangential flow filtration and isolating purified protein.

XX Disclosure; SEQ ID NO 4; 77pp; English.

XX The invention relates to a method for purifying a target protein from a
 CC mixture containing a host cell protein. This method comprises subjecting
 CC the mixture to a non-affinity purification followed by high-performance
 CC tangential flow filtration (HPRFP) and isolating the protein in a purify
 CC containing less than 100 parts/million (ppm) of the host cell protein,
 CC where the method of the invention includes no affinity purification
 CC process. The method of the invention is useful for purifying a target
 CC protein from a mixture containing a host cell protein, and is useful for
 CC incorporating the isolated protein into a pharmaceutical formulation.
 CC Proteins purified using the method of the invention are useful in a
 CC pharmaceutical respect, and are also useful in various diagnostic and
 CC therapeutic purposes. The method of the invention is efficient in
 CC purifying a target protein from a mixture containing a host cell protein,
 CC and may also be effectively performed at low cost. The current sequence
 CC represents the anti-CD11a rhumAb heavy chain amino acid sequence. This
 CC particular protein was used to demonstrate the method of the invention.

XX
PS Claim 22; Fig 9; 33pp; English.
XX
CC The sequence represents the heavy chain variable region from mouse
CC monoclonal antibody IOR-CEA-1. The framework sequence is analysed for T-
CC cell antigenic sequences using a computer algorithm, and compared with
CC human Ig sequences. The human Ig with highest homology (AAR93003) is
CC isolated, and residues not within a complementarity determining region,
CC canonical structure or Vennier zone are modified to reduce immunogenicity
CC in humans (e.g. in sequence AAR93004). This method, which involves the
CC introduction of only a few point mutations into T-cell epitope coding
CC regions, is generally applicable in humanisation of mouse antibodies. The
CC resulting humanised antibodies may be used e.g. as antitumour agents.
CC They retain the antigen recognition of the original antibody, but are not
CC immunogenic in humans. (Updated on 25-MAR-2003 to correct PI field.)

 XX
 PS Claim 4; SEQ ID NO 17; 49pp; Spanish.
 XX
 CC The invention relates to monovalent and divalent (dibody) single chain
 CC antibodies (scFv; ADF72729-ADF72730) specific for human carcinoembryonic
 CC antigen (CEA). The single chain antibodies are derived from the murine
 CC monoclonal antibody known as CB-CEA.1 or 1or-CEA.1 (referred to in the
 CC specification as CB/1or-CEA.1). The invention also relates to synthetic
 CC antibody fragments containing the heavy and light chain variable regions
 CC of the single chain antibodies of the invention, artificially joined
 CC together as Fab fragments, as other scFv fragments, as bispecific
 CC antibodies, or fused to biologically active domains; vectors that encode
 CC the single chain antibodies or their fragments; and host cells comprising
 CC the vectors. The CEA-specific single chain antibodies can be used to
 CC identify tumour cells that express CEA, but do not cross-react with
 CC normal human tissues or cells (except normal colonic mucosa, where CEA is
 CC occasionally present). The antibodies and antibody fragments can also be
 CC used for imaging or treatment of CEA-expressing tumours such as those of
 CC the colon, lung or breast, and can additionally be used to target
 CC therapeutic agents to such tumours. The single chain antibodies retain
 CC high affinity for CEA, but since they are 2.5-5 times smaller than the
 CC complete monoclonal antibody, they have better tissue penetration and are
 CC less immunogenic in humans. The present sequence is related to the
 CC invention.

PT	Isolated polynucleotide encoding bone marrow derived polypeptides useful for treating, e.g., Parkinson's, Alzheimer's, cancer, arthritis, Crohn's disease, and inflammatory bowel disease.	
PT		
XX		
PS	Claim 20; SEQ ID NO 6624; 504bp; English.	
CC	This invention relates to a novel isolated polynucleotide comprising a nucleotide sequence selected from one of 1680 sequences, a mature protein coding portion of them, an active domain of them and their complementary sequences. The invention may be useful for the production of compounds with an antiarthritic, antiparkinsonian, neuroprotective, nootropic, immunosuppressive, cytostatic, antipsoriatic, antiinflammatory, antibacterial, antiviral, antifungal or antiparasitic activity. In addition, the disclosed sequences may be useful for gene therapy. The polypeptides or their antibodies are useful for treating many diseases such as arthritis, Parkinson's, Alzheimer's, autoimmune diseases, cancer, psoriasis, inflammatory bowel disease and infections caused by bacteria, viruses, fungi or parasites. The present sequence is that of a human polypeptide of the invention.

PS	Example 1; SEQ ID NO 48; 186pp; English.
XX	
CC	The invention relates to a novel anti-nerve growth factor (NGF) antibody
CC	which binds NGF with a KD of less than about 2 nM and inhibits human NGF-
CC	dependent survival of mouse E13.5 trigeminal neurones with an IC50 of
CC	about 100 or 10 pm or less, where the IC50 is measured in the presence of
CC	about 15 or 1.5 pM of human NGF. The antibody of the invention
CC	demonstrates analgesic and immunomodulator activities and may be useful
CC	for preventing and/or treating pain, including post-surgical pain and
CC	pain associated with rheumatoid arthritis or osteoarthritis. The antibody
CC	may be further utilised for treating inflammatory cachexia associated
CC	with rheumatoid arthritis, as well as during gene therapy procedures. The
CC	current sequence is that of a murine anti-NGF Mab (monoclonal antibody)
CC	911 heavy chain extended CDR3 (complementarity determining region) mutant
CC	peptide of the invention which was used during construction of the
CC	humanised anti-NGF E3 antibody.

 XX New antibody mutant of a species-dependent antibody, useful for treating
 PT and preventing infectious diseases, psoriasis, inflammatory bowel
 PT disease, allergic conditions, autoimmune diseases, or cancer.
 XX
 XX Example; SEQ ID NO 46; 54pp; English.
 XX
 CC The present invention relates to an antibody mutant of a species-
 CC dependent antibody with beneficial properties. The invention is useful
 CC for treating and preventing infectious diseases such as human
 CC immunodeficiency virus (HIV) and rhinovirus infections, inflammatory skin
 CC disease such as psoriasis, inflammatory bowel diseases such as Crohn's
 CC disease and ulcerative colitis, adult respiratory distress syndrome,
 CC allergic diseases such as eczema and asthma, autoimmune diseases such as
 CC rheumatoid arthritis, systemic lupus erythematosus (SLE), diabetes
 CC mellitus, Reynaud's syndrome, immunological diseases such as
 CC tuberculosis, sarcoidosis, polymyositis and chronic obstructive pulmonary
 CC disease (COPD), CNS inflammatory disorder, skin hypersensitivity
 CC disorders such as poison ivy and poison oak, B-cell malignancies such as
 CC chronic lymphocytic leukemia and hairy cell leukemia, graft versus host
 CC disease and cancer. The invention is also useful in gene therapy. The
 CC present sequence is humanised murine anti-human CD11a monoclonal antibody
 CC (MM24) CDR-H3 mutant peptide. This sequence is used in the
 CC exemplification of the invention.

 XX
 PT New antibodies that bind to CD33, useful for treating a disease
 PT associated with CD33 expression, such as myelodysplastic syndrome, acute
 PT or chronic myeloid leukemia.
 PS Example 3; SEQ ID NO 79; 124bp; English.
 XX
 CC The present invention describes an isolated anti-CD33 antibody or its
 CC epitope-binding fragment comprising: (a) at least one complementarily-
 CC determining region (CDR); or (b) at least heavy chain variable region
 CC comprising 3 CDRs, and at least one light chain variable region, where
 CC the CDR has the ability to bind CD33. Also described: (1) an
 CC immunocongate comprising the antibody or its epitope-binding fragment
 CC linked to a drug or prodrug; (2) a composition comprising the antibody or
 CC epitope-binding fragment and a drug or prodrug; (3) a pharmaceutical
 CC composition comprising the immunocongate, composition or the antibody
 CC defined above, or its epitope-binding fragment, and a pharmaceutical
 CC agent; (4) a diagnostic reagent comprising the antibody defined above,
 CC where the antibody or antibody fragment is labelled; (5) inhibiting the
 CC growth of a cell expressing CD33 by contacting the cell with the above
 CC defined antibody or its epitope-binding fragment, immunocongate, or
 CC (pharmaceutical) composition; (6) determining whether a biological sample
 CC contains a myelogenous cancer cell; (7) an improved antibody or its
 CC epitope-binding fragment that specifically binds to CD33; (8) an isolated
 CC polynucleotide encoding the antibody or its epitope-binding fragment
 CC defined above; (9) an isolated polynucleotide encoding a light or heavy
 CC chain of the antibody defined above or its epitope-binding fragment; (10)
 CC a recombinant vector comprising the polynucleotide; (11) a host cell
 CC transformed with the recombinant vector; (12) producing an antibody or
 CC its epitope-binding fragment having the ability to bind CD33; and (13)
 CC obtaining CD33 from a biological material. The anti-CD33 antibody has
 CC cytostatic activity. The antibody or its epitope-binding fragment,
 CC immunocongate, composition can be used for treating a subject having a
 CC disease where CD33 is expressed, such as myelodysplastic syndrome, acute
 CC myeloid leukaemia, chronic myeloid leukaemia or pro-myelocytic leukaemia.
 CC It can also be used for inhibiting the growth of cells expressing CD33,
 CC and for in vivo imaging or as affinity purification agents. The present
 CC sequence represents a mouse anti-CD33 antibody heavy chain homologous
 CC amino acid sequence, which is used in an example from the present
 CC invention.

PT New composition comprising anti-insulin-like growth-factor-I receptor and
PT an agent, useful for treating cancer, e.g. ovarian carcinoma,
PT osteosarcoma, melanoma, multiple myeloma, neuroblastoma, or
PT rhabdomyosarcoma.
XX
PS Example 2; SEQ ID NO 72; 84bp; English.

XX
CC The invention relates to a novel composition comprising a first
CC therapeutic agent which is an antibody, or its epitope binding fragment,
CC and a second therapeutic agent. The antibody specifically binds to
CC insulin-like growth factor I (IGF 1) receptor. The IGF 1 receptor has
CC been implicated in promoting growth, transformation and survival of tumor
CC cells and several types of tumor are known to express higher than normal
CC levels of IGF 1 receptor. The composition of the invention demonstrates
CC cytostatic activity and may be useful for treating cancer, particularly
CC breast, colon, cervical, prostate, lung, or pancreatic cancer, ovarian
CC carcinoma, osteosarcoma, synovial carcinoma, melanoma, multiple myeloma,
CC neuroblastoma or rhabdomyosarcoma. Such treatment may be achieved with
CC the use of gene therapy techniques. The current sequence is that of an
CC antibody light chain variable region protein which shows homology to the
CC murine anti-IGF 1 receptor antibody EM164 heavy chain variable region
CC protein of the invention.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RESULT 1

A44371
Ig heavy chain V region - mouse (fragment)
C:Species: Mus musculus (house mouse)
C>Date: 30-Apr-1993 #sequence_revision 30-Apr-1993 #text_change 21-Jan-2000
C:Accession: A44371
R:Ayala, M.; Duenas, M.; Santos, A.; Vazquez, J.; Menendez, A.; Silva, A.; Gavilondo, J.; Bortolniquies 13, 790-799, 1992
A:Title: Bacterial single-chain antibody fragments, specific for carcinoembryonic antigen
A:Reference number: A44371; MUID:93040204; PMID:1418981
A:Accession: A44371
A:Status: preliminary
A:Molecule type: mRNA
A:Residues: 1-120 <AYA>
A:Cross-references: UNIPARC:UPI000014758D; GB:S49453; NID:9259511; PIDN:AAB24086.1; PID:
A:Note: This sequence is inconsistent with the nucleotide translation
A:Note: sequence extracted from NCBI backbone (NCBIP:119635)
C:Superfamily: immunoglobulin V region; immunoglobulin homology
P:15-98/Domain: immunoglobulin homology <IMM>

Query Match 75.0%; Score 54; DB 2; Length 120;
Best Local Similarity 63.6%; Pred. No. 0.1;
Matches 7; Conservative 4; Mismatches 0; Indels 0; Gaps 0;

RESULT 2

PH1698
Ig heavy chain V region (clone NP-7-11) - mouse (fragment)
C:Species: Mus musculus (house mouse)
C>Date: 24-Feb-1994 #sequence_revision 24-Feb-1994 #text_change 17-Mar-1999
C:Accession: PH1698
R:McHeyzer-Williams, M.G.; McLean, M.J.; Lalor, P.A.; Nossal, G.J.V.
J. Exp. Med. 178, 295-307, 1993
A:Title: Antigen-driven B cell differentiation in vivo.
A:Reference number: PH1675; MUID:93301607; PMID:8315385
A:Accession: PH1698
A:Molecule type: mRNA
A:Residues: 1-24 <MCH>
A:Cross-references: UNIPARC:UPI0000176A69
A:Experimental source: B cell
A:Note: the authors translated the codon AGT for residue 14 as Thr
C:Superfamily: immunoglobulin V region; immunoglobulin homology

C:Keywords: heterotetramer; immunoglobulin

Query Match 70.8%; Score 51; DB 2; Length 24;
Best Local Similarity 70.0%; Pred. No. 0.063;
Matches 7; Conservative 3; Mismatches 0; Indels 0; Gaps 0;
